Thread: [>>>> OverAim - Professional Overwatch Aim Assist Tool <<<<<](#)

Cryptolution - June 24, 2017, 3:57 pm

Hi there!

Welcome to the official Overaim HackForums thread!

We are here to announce that even after the last overwatch update, overaim is still undetected & working properly!

We've come a far end with OverAim and we would like to introduce it here in the HackForums community as well.

Overaim is an effective professional overwatch aim assist tool aka silent aimbot developed in c++.

We apologise that we don't have a thread design but supporting our customers and working on the assist tool has our priority and hackforums is the only forum we're posting on which uses thread designs in general.

How long has this cheat been undetected for?

Is this your first thread?

Note, how is HF affiliated to YOUR site in anyway. Please remove HF from 'partners'

Im High - June 24, 2017, 4:01 pm

Do you have any proof of it working? If so, what characters does it work with?

SIM-2223238 - June 24, 2017, 4:01 pm

Is this tool legal by law?

Yes this tool is 100% legal by law.

How?

Most forum we post on have the rule that they want advertisement back intrade for advertisement on their forum, i'm showing respect towards Hackforums and your acting like im disrespecting them but will contact a moderator about this, you are not obligated to even ask me to remove it, but i

appreciate your concerns tough just dont understand them ?

The tool have been undetected since the moment it have been created which was 3 months ago. ?

Fixed it ?I'm not saying anything about disrespect, It's just that HF would rather not be seen as 'partners' looking like a deal was disclosed between HF and Overaim.
I really have no say for this, it's just a heads up.

It's better to change it to:

'Advertised on'

No one gives a fuck of you advertise it, but you are advertising it as Omani setup a deal with you to post it there (which he didn't, and I don't think he would like the publicity of being partnered with a shitty aimbot). ?

We already passed the stage of giving away vouch copys, we've been selling for 3 months already just decided today to expand towards hackforums and a few other communitys aswell. ?

Website update: Changed "Our Partners" to "Popular Links" because it could send mixed messages to site visitors since Hackforums & Overaim or not official partners but most forums have the rule to linkback their forum intrade for advertisement + it's a form of respect aswell in our opinion.

Already changed it so your post is kinda based on old cows.

and yeah this aint a shitty aimbot this is probally the best one public for sale atm since xaim is having some troubles with blizzards new detection system & anti-pixel bot securitys ?

That's true, another reason that we've decided not to give away vouch copys on HF is because hackforums has our lowest priority regarding getting customers for an overwatch tool.

If we decide to giveaway vouch copys on a low priority forum such as hackforums (low priority regarding overwatch aimbots, yes) we are forced to give away vouch copys on all other 18 forums & 40+ facebook pages we are advertising aswell, calculate how much that would cost us ?

There is a video on our website, a few on youtube & i can provide you with a short trial of the tool if you can prove that you have the funds to purchase ?

Clearly stated out that HF is low priority for our niche which is the case, most forums or facebook groups we're posting on have ALOT more activity regarding our niche & game

keep in mind overwatch has 30.000.000 players and counting, not even 1% of that playerbase can be found on hackforums ?

I was offered a 10 second trial. I'll keep you guys updated ?

That was clearly a typo as stated out in my PM ...

Our trial is valid for 100 Seconds which is plenty to test out the potential of this tool in practice mode for example.

How big is your userbase? What is this written in? Any detections? Is this your first p2c cheat?

Im High - June 24, 2017, 4:51 pm

Just make sure you check his rep before dealing.

Our userbase is decent, it's written in c++ as stated out on the thread's first post & the tool is completely undetected at this point in time, i've been around in programming for 10+ years now, no this is deff not my first p2c....

?

We are now Ethereum accepted aswell!
