I'm not intended to ruin your business or service whatever you want to call. But how it can be bulletproof with such things like that on your TOS?

Quote:* Any activities related with Botnets are disallowed in server or not be accepted. Attacking, Spamming, abusing or anything generates report from service provider are disallowed or not be accepted.

On your website you say "Botnet Allowed" and others it generates abusive reports from companies etc.

This is real bulletproof? I don't believe. I'm not saying your services are bad, what I'm saying is you are selling something is not true, you hide your terms of service so if someone break the rules you can suspend the service and using your "terms of service" to avoid any responsibility about the suspension.

Is like "You said is allowed" you can say after that "No, we don't allow such things please learn our terms of service, we don't allow"

Be careful guys, I laughed a lot when we check the terms of service there are rules saying otherwise, that they announce.

I'm not saying that they suspend if they receive any abusive report, but they can do it in any time.

Current TOS ~ <https://i.imgur.com/rZHPgPj.png>

The most interesting is

Quote: Any activities related with Botnets are disallowed in server or not be accepted.

And now see this: <https://imgur.com/MzkuJxD.png>

Privacy is important? Well I don't think so

Quote:08. Using VPN connection which change our default connection + IP is not allowed. If you use then your account may Get suspended.

"Oh, don't worry we can ask for refund :D"

Are you sure?

Quote:2. You are no longer guaranteed a refund if you break any of our Terms of Service.

Like I said, I'm not saying that the service provided is bad or something like that. I'm only saying you're lying and do things without any transparency. I'm pretty sure if you receive a court order you will give the information. Why? You don't allow VPN connection or such things like that lol (This is based on your terms of service not the mine!)

So who guaraantes I can't be suspend from night to day? They can do it, they have it on their terms

of service, we can't complaint & we can't do nothing about it. But what we can see is the "truth" behind this "bulletproof" hoster.

Sorry mates, I can receive hate (I except that!) but this is the truth, and it can't be hidden, unless you like to pay and buy services that don't allow it and be suspended when they want.

That's the "bulletproof" they advertise lol, at hundred percent "bulletproof" oh yeah! Clearly it was. You can say "You can't do it on our onshore VPS" or "We allow only on Bulletproof servers" and I don't see anything saying that on terms of service, seems to be for "all services" no offshore/bulletproof mention rules if applies or not! Ops.

On your website you say "Botnet Allowed" and others it generates abusive reports from companies etc.

This is real bulletproof? I don't believe. I'm not saying your services are bad, what I'm saying is you are selling something is not true, you hide your terms of service so if someone break the rules you can suspend the service and using your "terms of service" to avoid any responsibility about the suspension.

Is like "You said is allowed" you can say after that "No, we don't allow such things please learn our terms of service, we don't allow"

Be careful guys, I laughed a lot when we check the terms of service there are rules saying otherwise, that they announce.

I'm not saying that they suspend if they receive any abusive report, but they can do it in any time.

Thanks for your time sir!

Like you said, these rules are for our onshore servers only.
We sold around 60+ bulletproof vps, we suspended 0.

Many are hosting botnets and many illegal shit (I can provide you screenshots of the nodes too), and all of them are happy.

I still don't know what is your point, you could've PM'd one of us to clear it up for you, instead of posting, but you chose to.
Hope I cleared everything up for you and you've got an answer.

Let me know if you need any assistance when buying from us ;)
We have 3 different packages, 3 100% bulletproof servers.

Some pretty interesting points have been made about things that are wrong with this product Litehoster, why not just fix them if it's something that is going to turn away buyers?

The professionalism I feel has gone out the window on this one, I mean I agreed with one statement and you PMed me saying i'm bashing your thread...

What virtualization do you use for your BP VPSes? I can't find it on the site. OVZ? Xen? KVM?

Connected how? As in it monitors the SSH sessions and stores the IPs connected on your webpanel? Or does it only show IPs that are connected to the webpanel?

Vouch for LiteHoster.

I bought BulletProof VPS - Advanced. The technical team is doing a good job. The support team is a bit slow, I guess they do not serve 24 hours a day. The prices are very cheap. For now everything is alright, I hope I don't have a problem. It would be better if we could customize the package like upgrade disk space, ram etc...

This host does not deliver servers anymore.

I placed an order at the 27th, submitted a ticket the same day.

No sign of any response or that they operate the site.

I paid using bitcoin and the transaction have well over 100 confirmations.

I will update when I get my server, until then stay away from this host.

SIM-2323060 - August 30, 2017, 3:21 am

Stop buying from this Hosting, Like I said this is not bulletproof hosting. They don't know what they are doing. They are only reselling, with no guaraantes! This is abusive and no privacy for users and clients (customers), run away from this hosting.

Like I said, stay away! Or you never will see your money. That's why we never should buy anything to non-skilled users. Specially "bulletproof" hoster, that isn't really bulletproof.

[Check this post](#), before order!

Wait, they're still accepting orders and taking people's money, despite them having no servers to deliver services on?

Someone should make a community alert. If no one does it in the next 8 hours, I'll look into it.

m8, my basic server got suspended after 1 single scan for LDAP amp list

scanning only around 60k IP/s, using around 3MB or 24Mbps of network, which took around 1 day, thats ok for the waiting

but its suspended, you clearly stated that its spamhaus ignored and scan allowed.

I did nothing else on the server, to be honest.

This is surely not BP host, and its resold from EuroHoster LTD, its simply not BP

I feel like getting scammed now. Your ticket says its up and running, but the server is offline for more than 2 days.

Your sale thread clearly says scanning allowed, but actually your hosting company suspended the (resold) VPS.

ITS STILL DOWN

BulletVest are you able to reply to this? I think it's obvious what kind of servers these are.
