What is the detection rate of your RAT stub?

I've recently made a web rat too (in .NET) and so far it has only one detection at scantime, so Im curious.

His address literally is:

adsdsasdasaasffssadfdsad

I feel his information it's faked. Godaddy doesn't really check that stuff ?

Okay.

andrius94 - July 3, 2017, 4:14 am

so this is a fake? for bots only? :(

?De?dW?lker - July 3, 2017, 4:57 am

Works I guess, capital letters everywhere, might be a bot mine, and the fact it says you don't need to download anything aaaand you need to download a builder. Why not go ahead and make fully a web rat and now download the server itself instead of a builder?

No.My rat is totally legit.If you dont trust me you can try the builder in a virtual pc.The Rat's itself no needed to download.So you can't even get virus on it

Well if you know a way for making stub with only php without a net binder and load to the server too much.I can do that.And if you dont know anything about a product than just dont talk.I worked to make this for days.And you are discredit my work.What is you proof?Saying "Might Be"?Thanks for your understanding.But remember everyone is not calm like me ?

?K47 - July 5, 2017, 10:22 pm
