Thread: [Why isn't there no completely simple way?](#)

23er341r14145t1r34d1413r1 - June 29, 2017, 8:26 pm

Why hasn't someone created a website that is so simple where you can buy every singly crypto with a multitude of different methods including paypal, debit, credit etc?

Somewhere where it's just easy to buy this shit instead of all the busting ass and +10% rates and ID and trusted bullshit.

Just curious why that doesn't exist. Seems like it would thrive. Then again, I'd love to be educated on why it can't.

evilace - June 29, 2017, 8:43 pm

Changelly allows you to buy coins with a visa or mastercard. Link: <https://changelly.com/>

Also another reason why you see high % rates is because some users chargeback due to a "fraudulent" charge so what some members do is charger a higher rate so that if there was a case of them getting charged back, it wouldn't hurt them as much as long as their business is big.

I honestly see no issue with having to verify with your ID in order to use paypal or a credit card. The seller OR the company want to confirm that it is INDEED your credit card. I sold on Paxful and always asked for ID to confirm paypal payments. I had very small percentage of chargebacks.

If I were to start a business and offered to take credit card or paypal, I would want you to verify your identity first before exchanging with me.

Of course, but I mean there should also be an instant way with every single method. Confirming ID isn't a big deal, but why doesn't Paypal make a deal with these large companies and understand their no fradulent so no chargebacks can be made? Hasn't Paypal thought about that?

evilace - June 29, 2017, 8:49 pm

I mean I heard that some reps will return the money back to your paypal account even if it involved digital currency. I don't think they want to partner with them because they are 2 different payment methods. I don't see it happening any time soon.

You know what would be a lot easier? If there was one universal method of sending and receiving money. Just one service that everyone used.

Omniscient - June 29, 2017, 11:58 pm

For a website to allow you to buy coins they have to run the wallets. To do that they need technical expertise, security, and servers. They aren't going to waste their time adding coins which aren't popular.

For you to "buy" a coin that means the site must possess it. That only happens because they open an exchange where the price fluctuates and various depending on the buys and sells. They don't just have BTC for you at will.

If you're expecting these places to take FIAT (us dollars for instance) then how do you expect that to happen unless they are legit company? Do they take credit cards? Wired money? Where is their banks located? And under what region do they operate within the law?

Quote:You know what would be a lot easier? If there was one universal method of sending and receiving money. Just one service that everyone used.

You know what would be even easier. If money, rent, food, and cars were all free and we didn't need to work. That would just be awesome.

What you're asking for is a childish dream.

/thread

OP you obviously have no idea about the risks that come with accepting fiat/crypto, and the legalities that need to be followed by doing so.

Makes sense, I'm not asking for a dream tho I'm merely speculating on why. I'm sure there could be a way to make one money exchange at least within countries with the power of some credit card companies or even alternative companies like Google. Just a thought. Good explanation tho.

d4rkj4y - June 30, 2017, 1:09 am

Well OP, why don't you start this company?

23er341r14145t1r34d1413r1 - June 30, 2017, 2:18 am

(Jun 30, 2017 01:09 AM)d4rkj4y Wrote: [\[CITE\]](#) Well OP, why don't you start this company?

No real excuse. Lack of knowledge and funds but I guess both can be obtained quite easily. Thinking of making a form of coinbase but instead of all the delay and limits, just opened limits at not an extreme rate. But to supply the website with the coins and all that will take a large sum of start-up money.

Chargebacks, fraud....enough for any company to start and go bankrupt within a month

Any PP/CC site will die within months due to carding/hacked PayPals...bank, not so much, which is why major exchanges accept bank but not cards or PP

\$ZEUS - June 30, 2017, 8:19 am

I don't understand any human that asks this stupid question regarding ID verification, at all. If you are dealing with money on a plastic card, EXPECT TO BE CARDED. You can get carded at the

grocery store, gas station, brokerages, and yes even at online exchanges. Imagine a world where Coinbase among others did not ID... Right, there would be none, they would go bankrupt within the 1st quarter. If you come up with a magical ball solution to tell whether a person has good intentions or not online, then by all means create an exchange.

As for you stating you thought about starting a coin buying/selling service but you don't have the startup funds, first fuck the startup funds... If you got credit/support you can get a loan, don't use that excuse. Second, you can go ahead and drop that idea because you made it pretty clear in your post that you have no idea of the workings of an MSB.. But no worries, it can be "obtained quite easily".

?, roasted haha, although, by new I think he mean't someone could make a new site like that.

Grizzlies - June 30, 2017, 8:29 am

First of all big thing you need is money. You don't have that, nothing exist here. Using credit card or PayPal is a big mistake in a business like this. chargebacks is a big bitch in this online world

23er341r14145t1r34d1413r1 - June 30, 2017, 9:11 am

LOOOL Bunch of dicks, I was just asking a question jheeze.

You would need either a shit tonne of coins from every currency or an API to automatically purchase coins. If you choose the second option (API), then you gotta wait ages on some coins to confirm so you can actually send them on lol.

Also, if you actually find an API to sell you those coins, then you've just found a website which does exactly what you're trying to do! You'd need a unique API for every single transaction between all of the currencies.

Overwatched - June 30, 2017, 10:11 am

Coinify is great and its built into blockchain.

You can get a \$200-1000 limit with NO ID

LanaDelRey - June 30, 2017, 10:24 am

As nice as it would be, people would chargeback the shit out of it. This will never happen unless PayPal changes their policies which isn't going to happen.

Omniscient - June 30, 2017, 1:45 pm

Quote: I'm not asking for a dream tho I'm merely speculating on why.

If you had placed at least 30 seconds of thought into it then maybe you'd know why.

Quote:I'm sure there could be a way to make one money exchange at least within countries with the power of some credit card companies or even alternative companies like Google. Just a thought.

You must be too young to have a credit card because you certainly don't understand how they work.

Quote:No real excuse. Lack of knowledge and funds but I guess both can be obtained quite easily. Quite easily obtained...hmm..

Quote:Thinking of making a form of coinbase but instead of all the delay and limits, just opened limits at not an extreme rate.

So in your head you think Coinbase is the pain in the ass they are because they aren't smart enough or have enough money to make it easier?

Quote:LOOOL Bunch of dicks, I was just asking a question jheeze.

Ask a dick question you get a bunch of dick responses.

Not asking a dick question, I appreciate the answers. And yeah, I am quite young that's why I was asking the questions so I can understand. We'll see what happens in the future. I'm sure things will get easier.

SirNX - July 1, 2017, 5:35 pm

Let's slow down guys. Look...

Ski, you're right. In your head and most people... Your idea is a "GOOD IDEA".

Concept is good. Strategy is good! There are only so many Rich people with millions of dollars in their bank accounts that want to invest in a technology company. Most millionaires have CTOs that work for them. Most people in Silicon Valley don't actually do any work themselves. That's your only problem.

Techy millionaire doesn't have finance experience. Finance millionaire doesn't have tech experience. And because everyone does something else, one person just does not feel comfortable doing this.

It's very possible to do what you are asking, but you know.. Fraud prevention.. Banks, wires, transfers... PayPal doesn't like Bitcoin... and so on. All you have to do is get off hack forums. Find a rich guy with money that knows Tech, Finance, Investments, Gov, Fraud prevention, High Risk merchant services, etc. I am not going to drop any names but I bet you \$100 that there is a guy in Los Angeles who can do this from ground up in under a year with his own team.

Dreams or not, it's possible. Someone just needs to put everything down on paper and have someone else review it until it's a bullet proof plan. Then sit down with a team of developers and get it up and running. It's like hey... Why isn't apple proving bitcoin buying services? Just because they are not interested in getting into the business, doesn't mean they can. You and I both know they have the brains, the money, and the people to make this possible today.

To Apple, bitcoin is not their idea. They are in business of Thinking Different, not boosting someone else's profits.

Look at all the international exchangers like BTC-E. They support lots of different secure ways of depositing money, Yet not a single US company is allowed to work with them. Why? A, US payment processors do not understand risk well nor can protect from fraud well enough to take the risk, yet companies like Flippa already supports international 3rd party escrow service that protects you from fraud for Wire Transfers, Credit Card, Debit Card and fund transfers between two customers.

I am not going to re-read what I just wrote or proof read it because it's going to turn into a book of valuable information, but here: <https://assemblypayments.com> Maybe someone will contact them and start a bitcoin or alt coin exchanger that will be more preferable for what you are looking to accomplish.
