Thread: [Need Help Editing A Landing Page \[HTML + CSS\]](#)

Cypical - July 1, 2017, 7:32 am

Been ALL fking morning and I still can't fucking figure out what it is that's not allowing me to access script after "#document"

If anyone can help me, I've clearly showed everything here:

You may have a better luck if you post this in [Website Construction](#) sub-forum.

People will help you out there.

What you are trying to accomplish is not very clear to me

Rushax - July 1, 2017, 3:16 pm

view-source:[insert url]

Copy and paste into a text editor.

Find the snippet you want to edit and save?

You'll see all the code as it's being brought in through an iframe and not from the DOM.

Crap.

Still doesn't show the iframe code :[

Still haven't contacted me about twitch prime

grady - July 1, 2017, 3:32 pm

It's in an iFrame, you literally cannot edit what's in it, but you can call functions within that iframe's page, given:They're on the same domain

They're both on https or http

Actually you can edit the contents with jQuery.

Cypical - July 1, 2017, 3:39 pm

(Jul 1, 2017 03:36 PM)Charger Wrote: [\[CITE\]](#) Actually you can edit the contents with jQuery. There's already a jQuery script in the website folder but there isn't anything about the style of the iframe.

Not sure if this is helpful at all.

What a legend. Such a cool dude.

If I had UB3R, I'd +3 you right away.

This user helped me solve my problem (which my retard self didn't notice) lmao.
