Thread: [1.12 uuid spoofing](#)

jelle.tonjann - July 1, 2017, 1:12 pm

Hi,

I recently found a 700 playerbase that is exploitable for the Bungee exploit. Well, I managed to find their numeric IP's. I have programs and tools to make use of it, but it's for 1.8 and the server is 1.12. Is there any chance to UUID spoof on 1.12 and if yes, can someone tell me how? And send me the files?

Thanks,
Tonjan

yes, it's possible.

you can even do it without any hacks or cheats at all. you need to change minecraft's launch arguments, but this can be difficult

Would you mind explaining it here?

He's banned by the way.

PM me the ip to the server, and I'll send you a 1.12 UUID spoof.

Hi! I have changed UUID in Minecraft launch command, it's working in single player, but on server it's different than one i entered. How to solve this? Thanks for help. :)
