Thread: [Problems wirh sslstrip2 and dns2proxy](#)

SIM-3615281 - July 2, 2017, 1:50 am

Hi everyone,

I am trying to work with sslstrip2 and dns2proxy and in the setup, everything went without a problem but now that I am trying to sniff for the passwords and when the website should change to http instead of https it still is https. What could I have done wrong?

Thanks

? the_Jok3r ?

Are you sure you understand how it works? Give me a quick description about how you (target) visit those websites

SIM-3615281 - July 2, 2017, 2:54 am

it opens up google types in facebook goes to the log in or is it different?

pomwtin - July 2, 2017, 4:35 am

Yes, this would be it. However, make sure to prevent ssl with google to force plaintext traffic, else it can not be manipulated

SIM-3615281 - July 2, 2017, 5:29 am

What? I don't understand what you mean

By the way is it possible that my network card causes those problems?

So I found out now that sslstrip and arp poisoning don't work anymore I've tried on different devices and even my three years old phone blocked so I'll have to find another solution but THANKS to everyone who tried to help you will hear soon of my next problem because I got a tip of one of my old friends so Thanks and have a nice day
