Thread: [ETH & BTC Predictions by August 8th, 2017](#)

Kill Joy - July 7, 2017, 4:24 pm

My predictions on BTC, ETH, and total market cap by August 8th are:

Bitcoin - \$1850

Ethereum - \$410

Total market cap - \$87B

I foresee a continuing bearish market into late fall-early winter.

Edit: If I were to change my predictions the week of July 31st they would be:

Bitcoin - \$3500

Ethereum - \$400

Total Market Cap - \$107B

Mr Kewl - July 7, 2017, 4:25 pm

Continuing a bearish market, why?

Kill Joy - July 7, 2017, 4:28 pm

(Jul 7, 2017 04:25 PM)Mr Kewl Wrote: [\[CITE\]](#) Continuing a bearish market, why?

Uncertainty and doubt about performance issues and scalability with both Ether and Bitcoin. These two coins/platforms really help drive the crypto economy. Also still feeling the effects of an extremely bullish market.

BeNT- - July 7, 2017, 7:09 pm

Yeah way too long for bearish. This is the crypto markets we are talking about. They turn on a dime.

I don't think the bleed is done, but by Oct 1st we should be seeing stable/growth (I think sooner).

I kinda figured that'd be the case considering the rep as well, I just like people to justify themselves.
I really shouldn't respond to them though lol

Hustla - July 7, 2017, 11:27 pm

There's a possibility we will see that ETH number soon. I predict it will hit it during the month of July for maybe a day or two and go back down. Then around August it will rise up and stable down.

thales - July 7, 2017, 11:28 pm

I don't think Ethereum will be THAT high but I agree with all your other predictions.

ShallowME - July 8, 2017, 1:44 am

Bitcoin : between 2000-2300

Ethereum : \$350

Kill Joy - July 8, 2017, 10:56 am

I admit the Ethereum prediction is high, but I am very optimistic with it. If it breaks the \$350 it can certainly reach \$410 easy.

I am mainly getting these calls from the upcoming bitcoin updates and forks.

NurSpec - July 8, 2017, 10:59 am

I agree with your predictions. The market is stale and I feel it will remain that way for the next few months, nothing really exciting.. personal opinion.

Trappy - July 8, 2017, 11:13 am

I completely agree on the bearishness, the bull run is now over for awhile.

However I think Litecoin will also hit big time, 100%+ increase by August 10.

I think late July will be the the start of a soon to be crazy crypto movement. The Summer of the Cryptos. August will be the primary kickstarter.

We are going to look back in three years in 2020 and say "The Summer of 2017 started it all."

shreder - July 8, 2017, 2:07 pm

Hard to say with ETH i think it will be around \$320-340

SkidHat - July 8, 2017, 11:37 pm

Well, you all seem to be new in the game or you don't have sufficient knowledge to do crypto-predictions.

Let's see what the experts predict:

cnbc.

cnbc. com/2017/07/07/strategist-tom-lee-weighs-sees-bitcoin-going-as-high-as-55000.html

The surprising thing is that these predictions came after the major market dip.

Pretty good predictions if nothing bad or good happens.

Money Man - July 13, 2017, 9:43 am

think eth will be higher, wouldnt this be past the POS? coin should def gain some more value from that since it wont be able to be mined anymore.

POS isn't fully happening till early next year or even later.

Toscan - July 13, 2017, 3:10 pm

Any predictions for stratis? Sorry for a bit offtopic. But anyway I think bitcoin will hit \$1500-\$1800 like you said. For Ethereum well it's hard to tell when it will jump up but it will.

?

Rhino - July 13, 2017, 4:23 pm

ETH prediction is a little high, but yeah i see it easily breaking the 300s and i agree that btc will drop below 2000.

Assuming everything goes great, I can see this after the 8th but not before.

At \$2000. Once it breaks there's no knowing how low it can go. I can see around \$1500 now honestly.

Pretty sad people aren't buying into ETH rather than just pulling out of the market.

Personally buying ETH incrementally.
Already bought about 60 Under 200\$ prices today,

Expecting later drop the next few days.

Yep, but the more important date is still to come.

Malentor - July 25, 2017, 6:18 am

I still believe on the ETH prediction to \$300+ in some time soon , I see this way:

Option 1: BTC gets lower than \$2000 , people panic sell and change to ETH (little bump possible here)

Option 2: BTC goes to the moon \$3000++ , ETH will follow its rise like it always did.

Still an hour left in the day. BTC hit resistance and fell a little bit while ETH is skyrocketing to 14%+ today.

My predictions are about \$100 off on each. Not bad. Closing this thread as August 8th draws to an end. SegWit locked in today as well.

Thanks for the discussion everyone.
