Thread: [Keylogger - Capturing keystrokes and get screenshot](#)

ASlopaR - July 11, 2017, 6:06 am

Hello guys! :)

I want in my keylogger for Windows, feature, which every press Return key create screenshot, and send the screen to email + get the file path of active window.

If I compile the script i get (syntax) error

<https://pastebin.com/36Fy22Fg>

Malentor - July 11, 2017, 6:25 am

i didn't ran the script but I can see a indentation error, probably thats why.

edit: just noticed there are other errors

elif:

you can't use elif like that.

ASlopaR - July 14, 2017, 2:05 am

Ok.. That error is resolved.

New script:

<https://pastebin.com/PCfurFpk>

Error in line: `hooks_manager = pyHook.HookManager()`

Vanagander - July 14, 2017, 3:58 am

Code `f.write(GetWindowText(GetForegroundWindow()))`

Missing a closing parentheses are we not?

MindOfLogic - July 18, 2017, 4:39 pm

Good god son, you need to try harder than this.

? seeing a few things thats wrong

PHP Code

```
<?php
def Keyloger():
    def OnKeyboardEvent(event):
        f = open(log_file, 'a')
        f.write(event.Key)
        f.close()
    if event.Key == 'Return':
        f.write("\n")
        f.write(GetWindowText(GetForegroundWindow()))
```

my issue is here:

PHP Code

```
<?php
f.close()
if event.Key == 'Return':
    f.write("\n")
    f.write(GetWindowText(GetForegroundWindow()))
```

you close the file and then attempt to write to it,

Problem has been solved.. (I'm sorry I did not say so long)

Compilation runs smoothly, without errors

My new problem is mail sending and writing info to log_file..

Code is here: <https://pastebin.com/MvGVjHDV>

If I run this script on my computer, log_file is created, If I open the log_file, shows only first line and nothing more..

If I press Return nothing (no screen, no change in log_file, no new mails sended to my mail)
