Thread: [How do I check if I was ratted?](#)

LOBOT - July 11, 2017, 9:06 pm

How does someone check if they have been ratted

Sheeple - July 11, 2017, 9:45 pm

I like to use Process hacker to check any network connections being made that aren't supposed to be there,however; you can check your outbound connections with Task Manager or run a anti virus scan with malwarebytes, or install an actual anti virus

PerfectStorm - July 11, 2017, 9:50 pm

I also like to do this as a quick check. Also doesn't hurt to do a shell:startup and check out your files in run. Think OP should change section though.

LOBOT - July 11, 2017, 9:53 pm

Is this all i can do to check

5chn4pp - July 12, 2017, 4:19 am

Please download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Note: You need to run the version compatible with your system. If you are not sure which version applies to your system download both of them and try to run them. Only one of them will run on your system, that will be the right version.

Right click to run as administrator. When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce logs called FRST.txt and Addition.txt in the same directory the tool is run from.

Please copy and paste the logs back here.

Say I have things that my virus protector would remove if I scanned
How do I manually scan for a rat

5chn4pp - July 12, 2017, 11:19 am

How do I manually scan for a rat

Are you saying that your antivirus removes the FRST program? If so, disable the real-time scanning and try again.

If you are asking for a manual rat scan, the FRST program is exactly that, a manual scan.

Hackoo - July 12, 2017, 11:30 am

Hi ?

You can also check your PC with [AVZ Antiviral Toolkit](#) ?

LOBOT - July 12, 2017, 11:33 am

Yeah but im looking to do a manual check so the virus scanner doesnt remove some files i need

5chn4pp - July 12, 2017, 11:37 am

FRST scanner will not remove any files in scan mode, only in the fix mode.

bomberis - July 13, 2017, 9:07 am

pm me, i could help you easy

AdmiralHere - July 14, 2017, 5:03 pm

1.) Farbar Scan & Recovery Tool, super easy to use. Youtube is available. Try and disconnect if you believe it's a rat, and disable the adapter. Re-enable this when done. (This is just to make sure you don't reconnect automatically) Delete it with Farbar.

2.) An anti-virus could be helpful but it may be FUD, (fully undetectable).

3.) Check Task Manager / and startup programs. Try and disable anything if you're unsure of the program. After you've FARBARRED it.

4.) Double check everything.

Good luck. :)

Wrong, FRST is one of the hardest tools to master and it should only be ran under supervision.

Check the connections to your machine and also the startup folder and msconfig. You can check the connections by using the NETSTAT -A command via the Command Prompt.
