Thread: [Account creator doesnt work](#)

K???er - July 13, 2017, 4:17 am

I tried to make an account generator with some help of tutorials on YouTube, but I cant get it to work.

I get this error:

"System.Threading.ThreadStateException: "The thread has not been deferred by the user and can not be resumed."

Can someone help me out? If so, hmu with a PM.

Did you use Thread.Abort? If so, check this:

<https://stackoverflow.com/questions/1054889/restarting-a-thread-in-net-using-c>

This is where the error is, says Visual Studio.

I think there's a logic error in your code. Why did you leave the thread resume out of the original code? What is its purpose there? Basically if the thread didn't start (I assume that's what the 'Started' boolean is) then it starts it and sets the boolean to true. Now, after that, it will jump to thread resume but the thread already started, so unless something went wrong it will throw an exception. So just remove it, I say.

You should also try to add a 'Try' to your code.

Incomplete code. Why there's a Resume there?
