Thread: [Can i make any money with these specs?](#)

Ekida - July 14, 2017, 9:57 am

Hello, i'm new into cryptocurrency mining but i was wondering if there is any coin that doesn't require a high-end PC to get some cash. these are the specs of my PC.

PC1

+ samsung 250GB SSD Evo & 186GB HDD

PC2

Deaaadly - July 14, 2017, 11:24 am

maybe a dollar every month

Esme - July 14, 2017, 11:33 am

Absolutely useless for any form of CPU/GPU mining. Sorry pal.

Ekida - July 14, 2017, 11:48 am

i see, i added the PC2, do you know if it could make any cash? if so, how much?
thanks

Not really. I mean you can make a bit, but not enough to be worth your time.

You don't mine with the harddrives, you mine mostly with the graphic card if I recall correctly

You will be loosing money no matter what with those builds

All coins REQUIRE high end systems

Think about that logic "Lets make a coin that is easier to mine and makes you more money!" im afraid the world doesnt work that way

You pay for the performance you put out and not one coin is going to make it easier than any other.

Debugger - July 19, 2017, 5:16 am

why you don't E-whore ? need time & time is money :)

You can mine Burst with your HDD but its so backwards and really not profitable at all

You will be loosing money no matter what with those builds

Sir Hunningham - August 4, 2017, 1:14 pm

These builds will never sustain the amount of electricity you will use VS the coins you will mine
