Thread: [how to copy website pages url links](#)

mrალიhaider - July 14, 2017, 1:45 pm

hello, i want to copy all pages url links from shutterstock website in the food category

[www.shutterstock.com/search?page=1
&searchterm=Food&sort=popular&image_type=photo&safe=true&search_source=base_search_for
m&language=en](http://www.shutterstock.com/search?page=1&searchterm=Food&sort=popular&image_type=photo&safe=true&search_source=base_search_form&language=en)

note that the number in red is a page number variable and it is from 1 until 151018
so {1..151018}

what tool can i use, if you could tell me a tool
or write me bash script i would appreciate it.

SIM-3642159 - July 14, 2017, 7:00 pm

im not going to write the script for you but, wget the url, sed to remove the urls and output them in a
txt file and loop my dude.

Hackoo - July 14, 2017, 7:24 pm

Hi ? if you mean a batch file ?

Just a little Loop [For /L](#) and you will got it like this script ?

```
Get_shutterstock_Urls.bat
Get_shutterstock_Urls.bat (Click to View)Code @echo off
Title Copying website pages url links from shutterstock by Hackoo 2017
mode con:cols=100 lines=3 & COLOR 0E
Set "URL_File=shutterstock_URLS.txt"
If Exist "%URL_File%" Del "%URL_File%"
echo(
echo(
For /L %%i in (1,1,151018) Do (
    Cls & echo(
    echo    Please Wait a while Copying website pages url links %%i from shutterstock is in progress
...
    (
        echo
http://www.shutterstock.com/search?page=%%i^&searchterm=Food^&sort=popular^&image_type=p
hoto^&safe=true^&search_source=base_search_form^&language=en
    )>>"%URL_File%"
    )
Start "" "%URL_File%"
```

Edit : You can also do it, with a vbscript file, it's much faster then the batch file ? ?

```
Get_shutterstock_Urls.vbs
Get_shutterstock_Urls.vbs (Click to View)PHP Code
<?php
```

Option Explicit

Dim fso,ws,File,URL_File,i

Set fso = CreateObject("Scripting.FileSystemObject")

Set ws = CreateObject("WScript.Shell")

URL_File = "shutterstock_URLS.txt"

Set File = fso.OpenTextFile(URL_File,2,True)

For i=1 to 151018

File.WriteLine "http://www.shutterstock.com/search?page=" & i & _

"&searchterm=Food&sort=popular&image_type=photo&safe=true&search_source=base_search_for
m&language=en"

Next

ws.Run "Notepad "& URL_File

???

mrlihaider - July 16, 2017, 8:24 am

thank you Hackoo but i use linux mint

i can't use your script

still need this question if you could help i would appreciate it

oneghost - July 16, 2017, 2:53 pm

It's sound for me as a scraper your questions if I understood it wrong please send me more details on PM (what info do you want to gather , url pictures description?)

you should try to find which one will be the last page before increment the page number and when the last page will be = with the value from loop to make the script to stop.

with curl , sed , grep and a loop you may be able to do it.

or if you didn't decide yet how to do it, I may recommend you to use php (with dom or directly CURL with some functions) or perl scripting , as you may randomize the information's about your browser.
