Thread: [is it ok to leave ur computer on sleep?](#)

FatherTenzin - July 15, 2017, 9:08 am

i have lots of tabs that i hate to close when i turn off my computer, and having to open everything again is a lot of work . but i feel like letting my computer sleep is unhealthy for it ??? im not sure could anyone let me know thanks

Smexy - July 15, 2017, 9:09 am

You should place your computer in a cooler or freezer.
Either way its gonna die! :c

Sortiace - July 15, 2017, 9:11 am

yup and then you will need to pay for the funeral..

Ratt - July 15, 2017, 10:24 am

A simple Google search would've helped you.
It's fine, they're not going to add an option if it will hurt your PC.

DrDoof - July 15, 2017, 10:26 am

If the tabs are your only issue just enable the setting to reset all tabs on application start..?

(Jul 15, 2017 10:21 AM)FatherTenzin Wrote: [\[CITE\]](#) Man u ppl r. Fucking stupid
Says the fucking autist wtf

NurSpec - July 15, 2017, 10:30 am

Doesn't matter if you do or don't leave it on.. all mockery and rumors, neither are harmful.

sure ?

Uncle Jody - July 15, 2017, 10:38 am

I would buy a cooler for your computer if I was you

Pulz - July 15, 2017, 10:42 am

I put my PC into sleep mode all the time.
In fact, for the exact problem you described- I eliminate startup waiting by putting it into sleep mode and then flicking the power switch once it's "sleeping".

The following day, I just flick the switch and it wakes up.

_huxx - July 15, 2017, 10:47 am

why don't you try hibernation

it saves your computer current state and puts it to hibernation when ever you will open computer it will lag but you see everything is in place sure it will take to open u need much ram to boost it or SSD

Bagel - July 15, 2017, 12:07 pm

Why not just get an SSD and set it as your boot drive so it boots fast so you wouldn't need to sleep mode it

Gbulla - July 15, 2017, 12:24 pm

Sleep can never be unhealthy.

FatherTenzin - July 15, 2017, 2:19 pm

My shit does boot fast takes like 2 seconds, but i hate losing all my tabs hat i had opened

?thereum - July 15, 2017, 5:34 pm

I have arround 100 tabs open and 30 unsaved documents open when i go to sleep. because i am lazy i just turn my monitors off.. I leave my pc usually on for 1 / 2 months then i do a restart just because the ram starts to freak when being on for a long period.. Havn't had to replace a part since i build it 4 years ago.. so i would say no worries ?

VYLLYN - July 15, 2017, 6:16 pm

my computer automatically goes into sleep after a certain amount of time not being used and i just let it happen i never turn my comp off

MaxVelocity - July 16, 2017, 10:56 am

No it's not harmful, but if you want to fully shutdown it and not lose your tabs, there're extensions and alternative to them is F5 Each tab and go to sleep, once you wake up look up the history

xthekevin88 - July 16, 2017, 4:52 pm

after a few days ur pc will slow down really hard

Charger - July 16, 2017, 4:54 pm

(Jul 16, 2017 04:52 PM)xthekevin88 Wrote: [\[CITE\]](#) after a few days ur pc will slow down really hard Not with an SSD.

I just cycled my computer for the first time in 67 days. Up until I restarted it, it was running no different than it is now.

An SSD eliminates a lot of issues.

Caligeina - July 16, 2017, 4:56 pm

I try not to keep it on as my rooms is often quite hot, however if you're in a cool room you should be fine. Just make sure your case vents are clean.

ohxerxe - July 16, 2017, 5:30 pm

This can definitely cause issues if you keep the PC on for a prolong amount of time. Nothing specific but I do know it can cause Internet connectivity issues. Overheating is a concern as well, I used to keep my pc on for a week at a time and it really started to suffer performance wise.

Prom?nent - July 16, 2017, 5:40 pm

Just shut it off, I wouldn't leave my computer on sleep.

6god - July 16, 2017, 6:24 pm

I never turn mine off, from what I've noticed, well if you're using HDDs... is that frequent turning off and on of the drives can cause them to die faster than if leaving them on, then again you can also wear out other components by leaving it on.

I never had any problems with leaving mine on though and I've had this PC for 6 years.

Windows - July 17, 2017, 7:00 am

I never turn my computer off, always leave mine on sleep though every night but I wouldn't advise it because it fucked mine up with the internet sometimes it connects/sometimes it doesn't.

(Jul 17, 2017 07:10 AM)Funtela Wrote: [\[CITE\]](#) Holy crap 2 months? I'd try restarting it more often lol. Nah, i honestly don't care.. I replace the parts if something breaks.. Its cheaper for me to do that than turning it on and off everyday ?

tremorr - July 17, 2017, 7:19 am

It's okay to leave it on sleep but you should shut it off once in a while and maybe save your tabs to open in your chrome settings.

aana - July 17, 2017, 4:23 pm

I leave my Open BSD Gnome desktop on all the time i think it took it 4 months to crash? but that was because i was installing a package and it caused it to crash.

i don't see a reason why you can't leave it online even windows as long as it doesn't over heat otherwise i don't see a problem why not. but windows is designed to be restarted often so i wish you good luck getting 4 months without any issues.
