Thread: [Restarted my pc and cant get back in \(windows error\)](#)

Bluffer - July 15, 2017, 5:10 pm

Literally all i did was restart my pc and now this Windows error is preventing me from getting in.

Nachfolger - July 15, 2017, 5:12 pm

Did you remove any storage device during boot?

Have you tried restarting it?

Bluffer - July 15, 2017, 5:16 pm

Yes restarted it 10x already. Now it says something about à driver

No never rémoved anything

.

Bluffer - July 16, 2017, 7:10 pm

Does anyone else have some advice before I spend over hundred dollars to get it fixed?

ka\$h - July 17, 2017, 2:40 pm

Are you able to create a bootable windows 10 USB? If so you may be able to fix this yourself.

nicksaban1 - July 17, 2017, 2:41 pm

This to get into repair mode. Also, with this method you can do a system restore.

Bluffer - July 17, 2017, 3:51 pm

Already took it to the computer guy, apparently one of my HDDs is shot. This is bad news.

Well tbh he probably just said that, as the issue is related to the HDD, and now he can charge you big money, good luck hopefully it's ok.

Quote:I tried to scan your 1TB Drive with malwarebytes & stopped 3 times at the 7

minute mark.

He should have run dskchk at boot or at another computer with it as a external drive. Well unfortunately for me I have no choice but to believe this guy knows what he is doing. I just want my computer to work lol.

Looks like I might be losing everything on the harddrive that is dead which is going to be horrible as I have a lot of cool stuff on there.

Also who knows how much this guy will charge just to put the new harddrive in and load windows 10 on it.

Thinking of bringing it to the guy I got it off of originally but he's out of town until the 24th, I'll be moving the next day which means rough circumstances lol.

Lukas - July 17, 2017, 8:24 pm

I'd save my money and just buy a new HDD for now along w/ a \$15 Windows 10 Pro key from [GamesDeal](#). Isn't difficult at all to change out an HDD, just a matter of plugging in a couple cables and remounting it. Just need to boot Windows 10 from a USB on the new device and you'd be good.

Someone correct me if I'm wrong on this, but if he bought an external reader for the corrupt HDD, couldn't he try and plug it into his computer to see if it'd read it and possibly retrieve files?

Plus the guy already has my pc, has already spent a few hours attempting to transfer files apparently, fuck my life.

Living Joy - July 24, 2017, 3:57 pm

looks like a corrupt windows could be a virus or you could have a shot hdd but if your hdd is dead you would get a error after post saying to insert a bootable media

Bluffer - July 24, 2017, 8:33 pm

Got me pc back actually but he said it was indeed the hard drive. Apparently guy who sold me the pc had a 5 yr old drive in it so all I had to do was buy a new drive and pay the guy for his time which included recovering some of my data and reinstalling Windows.

GrandpaSherman - *July 24, 2017, 8:50 pm*

First off, you're the type of person that needs to stick to laptops or consoles.

User_boy121 - *July 24, 2017, 8:55 pm*

I would try yelling at the PC. Researchers show that physical or verbal pc abuse amounts up to 70 percent of computer fixes. Thank me later. It's cool.

And you're the kind of person who needs to stay off my thread if you have nothing constructive to add.

This problem is dealt with, closing the thread.
