Thread: [CSS Container Background](#)

ciNGi? - July 16, 2017, 3:21 am

So I attempted to make the container background transparent, but it does not want to cooperate.. Any ideas?

Spoiler ([Click to View](#))

CSS

```
Code * {  
  color: white;  
  background-image: url("armory.gif");  
  background-size: cover;  
}
```

```
.centerContainer {  
  width: 1000px;  
  margin-left: auto;  
  margin-right: auto;  
  background:transparent;  
}
```

HTML

```
Code <link rel="stylesheet" href="style.css" type="text/css" />  
</head>  
<body>  
  <div class="centerContainer">  
    <div id="quoteText">Order of Khaos Members</div>  
    <div id="divider"></div>  
  
    <div id="membersList" class="scrollbar">  
      Gingie<br>  
      Knightro<br>  
      Lil Poison  
    </div>  
  </div>
```

Where in the page are you referring to? Your screenshot shows the container is already transparent.

Make sure your CSS isn't cached. Try using:

Code background: rgba(0,0,0,0);

You're using it from this site aren't you?

<https://money.team/>

The code is exactly the same.

The CSS for the container is being made up of the background image from:

Code background-image: url("armory.gif");

If you take that out, then it will have a blank white background, is that what you're after?

== EDIT:

I think I know what you're saying.

The code for `*` is referring to all elements.

Code `*{`

`background-image: url("armory.gif");`

`}`This is making all elements have a background-image of that image.

Change that line out of the `CSS` element and put it to the body like so:

Code `body{`

`background-image: url("armory.gif");`

`}`

Then the background color will show for the elements. This problem is caused by background-image having priority over showing a background-color.

Made a quick JSFiddle here:

<https://jsfiddle.net/x7o4kp05/3/>
