Thread: [Access to 2030\\$/Month Server | 10GBPS PORT | High End Config](#)

delhiar - July 17, 2017, 12:40 am

Hey. Recently i got a very high end server from 10gbps.io to test out.

Pricing on site -
Spoiler ([Click to View](#))

Config :-

Location London
CPU 2 x E5--2620v4
RAM 4x16GB
Bandwidth 10Gbps unmetered
Storage 2x480GB SSD

Who will get it? - Tell me what you wanna do on this server. if i think it is cool enough and can properly utilize it's 10gbps bandwidth then you'll get it.

what can you do on this? - i got it for free. so you can try anything really.

duration - it was a week's trial and already 2 days have passed. so i am guessing 4 days or so. (i can get new server once this stops working)

Hey, I would love to have access to this. I want to setup a private server for a game I like. Thanks OP!

Pronouncer - July 17, 2017, 3:42 am

I want to use this server to split it up into numerous miniature systems with those I want to configure a private connection relay, kind of like a VPN but like 8x more secure than a standard encrypted VPN, data goes in one way and goes through 8 different encryption methods along with empty packets and junk data being transmitted confusing anyone who wants to try and peek into your traffic and release it for free for HF members.

It needs a lot of bandwidth as it will constantly be handping global connections repeatedly modifying the data and sending fake data

I'd most likely try to run a shit load of runescape bots if I had something like this and make all of them collect cowhide.

xd

I would run a autoclaimer on it and see how fast it is.

Hellsavage - *July 17, 2017, 11:13 am*

i would like to setup my private server! thank you for this giveaway.
