Thread: [Imminent Monitor bans IDs?](#)

Oribasan1 - July 19, 2017, 6:28 am

Sooo I wanted to get a buyed RAT, and I would like to buy Imminent Monitor but some said that the support of them bans IDs due BlackHat activities. Is that true?

Riyu - July 19, 2017, 6:30 am

Yes, IM, Orcus, LL ban licenses.

Predator2 - July 19, 2017, 6:30 am

Absolutely yes your license will be terminated and your information will be submitted to the feds if they ask. IM dont allow any illegal and blackhat or even greyhat activities.

Oribasan1 - July 19, 2017, 6:33 am

Thank you all for the fast responses, what kind of RAT should I use? I want a nice GUI if this is possible

SysAdmin - July 19, 2017, 7:24 am

Depends on what you really want to do. You could just use metasploit to generate a shell and you don't even need to buy it. GUI means absolutely nothing other than being "User Friendly"

Oribasan1 - July 19, 2017, 8:54 am

Yea. I want a nice looking platform if I work on it hours.

SysAdmin - July 19, 2017, 9:01 am

I suggest you get used to a command line. Unless you plan on sticking to just a RAT for home usage, which by your thread i doubt so. You will also need a crypter if you want to infect victims.

My advice. Get out of the mindset of using publicly sold malware to do blackhat activities

I'm not the morality police (I actually don't give a fuck if you go to jail) BUT if you're needing to ask questions like this, then you're definitely in over your head.

If IM finds out that you infected someone illegally they will ban your ID. This is how they are able to maintain a legitimate business. Obviously they know that 99% of their users are using their "Legitimate administration software" as illegal malware.

Why the fuck else would anyone come to an internet backwater like Hackforums and buy some sketchy looking

shit thats been owned by 3 people in the past and boasts features like "process injection" and "silent miner"? They're just trying to make money and need some way of disconnecting themselves from the actions of their customers.

I always reccomend people learn linux and

networking first, but before you start fucking around with closed source skid tools DEFINITELY learn to code first.

-> Learn to code.

You want Malware, code your own.

Oribasan1 - July 19, 2017, 11:10 am

Thank you all for your responses. Ill try to take that advise as best as I can. Coding is timeconsuming asf but I still give it a shot.
