Why do you not like sentry? You could also use Snipr or blackbullet if you are looking for alternatives

I have heard about that can you explain how sentry MBA works and the need for proxies and combo list
Is their any tutorials for it ?

This site isn't the best place if you're trying to get into account cracking.

I suggest you go to " Nulled.to " as it's where you can learn everything about cracking, ect. I hope I helped.

Sentry MBA use a list (of username and password) and proxies to check if the website being "tested" has the current username:password as a valid user on their database. It's pretty much a trial and error procedure. There's a lot of youtube videos about it, but you going to need a little work to find good combos.

Blackbullet is good, Look on github.

xtdozo - May 7, 2019, 11:54 pm

Why don't you like sentry? It's amazing
