Thread: [Kaiten](#)

Scotsas - July 23, 2017, 2:33 pm

Hey,

I've recently been messing around with IRC Botnets,
But i'm unsure on how to set up kaiten with unreal ircd.

How is it linked?

Found a few tuts on here,
But not any bit of luck so far.
Would be nice if someone could help me out

AnonTri - July 23, 2017, 2:35 pm

You install the irc on your server. Modify the bot to connect to your server on your port. Then compile and spread.

So i get that i firstly have to install unreal on the server

Than configure the kaiten script the credentials of the unrealirc
And then run the kaiten script?

Change the host ip to your server ip and port then compile kaiten and infect whatever you are targeting with kaiten.

Compile, Run the script and start infecting right?

AnonTri - July 23, 2017, 2:45 pm

Yes. Kaiten is just the bot used to infect devices.
