I have a few questions, could you please answer them?

1. What is the size of the built file?
2. 4 spreading methods, USB, Twitter, Skype and Facebook, correct?
3. Is the output file native? Can it be crypted (I am using CyberSeal).

1- 27-50 kb

2- actually its 5 spreading methods if u consider fb friend spread with it, also we will add more method soon.

3-Sure you can easy encrypt it with any crypter.

3. Yes you said I can crypt it, but does it have any dependencies like .net 2.0? Or is it completely native with no dependencies?

This seems nice, I think I will purchase a build.

You can use it to spread links like CPA/ADS or promoting websites , it doesnt matter if u dont want to spread the file itself so it can be used in multi purposes.

package and how about the LAN spread?

Bronze and silver packages have been deprecated and we don't sell it atm .
we sell only gold and expert packages.

Regards ?
