Thread: [Patcher for all versions Charles \(charlesproxy.com\)](#)

Qmaks - July 26, 2017, 12:43 pm

Hello, i'm from Ukraine! At leisure, accidentally fell under the arm of Charles and I even wanted to make him an autopatch.

In use, there is nothing complicated. All you need to do is double-click my software.

If it displays a file selection window, you will need to select the charles.jar file because it did not find them in the "C:/Program Files/Charles/lib" or "C:/ Program Files (x86)/Charles/lib".

Further from possible errors there can be a window which says that you specified the wrong file (This is again the same if you selected the file itself).

And the last possible error is the lack of rights to create files. The solution is quite simple - run cmd (Command line) on behalf of the administrator and register there: `java -jar path_to_my_patcher` (Example: `java -jar C: /CharlesPatcher.jar`).

I do not seem to have forgotten anything. If that, then the patcher simply gives you litsuhu and you no longer have to wait 10 seconds at startup or settle all your affairs in 30 minutes of the work session of the product.

Screenshots here are hardly necessary, so catch the link for downloading -> yadi.sk/d/-622VX3B3LS8Tz
