Thread: [Log data received at postback?](#)

FaberCastell - July 27, 2017, 3:01 am

So yeah i entered my site url to the php file as a postback, and these are the instructions

And i did

```
$offerid = $_GET['offer_id'];  
$offername = $_GET['offer_name'];  
$affiliateid = $_GET['affiliate_id'];  
$ip = $_GET['ip'];  
$ran = $_GET['ran'];
```

But it's not working... Is there a way i could log what i am receiving and save it as a file? How?

Charger - July 27, 2017, 6:44 am

```
file_put_contents("log.txt",$data)
```

PHP Code

```
<?php
```

```
$data = $offerid . "\r\n" . $offername . "\r\n" . $affiliateid . "\r\n" . $ip . "\r\n" . $ran . "\r\n";
```

Puts each of these variables on a new line use the code posted from charger to add to text file.

```

Puts each of these variables on a new line use the code posted from charger to add to text file.

Your "\r\n"s should be "\n". Along with that, "\n" is the standard POSIX style so unless you're on Windows you should be using that.

O ya my bad im usually using html so I use
 i don't work with text files much.

PHP Code

```
<?php
```

```
$data = json_encode($_GET) . "\n";
```

```
file_put_contents("log.txt", $data, FILE_APPEND);
```

```
?>
```
