Thread: [Bust a bit - winning strategy to make up to \\$4000 a day.](#)

SirNX - July 28, 2017, 9:52 pm

Bustabit is a scam. Ryan manually steals money by busting after he checks visitors IP location to see if they live in a wealthy area.

Here is a winning strategy for Bust a Bit!

Automatic Betting:

bet X amount. If lost multiply by 6.67. If won return to X.

Set bust at 1.3. Have 1,000,000 bits in your account. X should = bellow 444 bits. 444 bits $\approx$ 0.25 = minimum win of 60 dollars per hour. Maximum win up to \$1000 per hour.

DO NOT RUN SCRIPT FOR OVER 120 MINUTES!!!!!! YOU MUST PAUSE AND RESTART.

I am giving you this to get as much money as you can out of bustabit. He doesn't deserve to steal peoples money. Only fair that you use the winning strategy to teach him a lesson. His website does not have a fair play value. The math that he advertises nor the formula that he posted on BitcoinTalk is real. It's all fake.

?????

Knucklez. - July 28, 2017, 9:54 pm

Well this is a new one and I've heard a lot of assumptions about BAB.

Neal Caffrey - July 28, 2017, 10:09 pm

What if I put 1,000 and make my bet 1? xd

SirNX - July 28, 2017, 10:09 pm

(Jul 28, 2017 10:09 PM)Neal Caffrey Wrote: [\[CITE\]](#) What if I put 1,000 and make my bet 1? xd
Have fun. Don't be stupid. Your comment is pointless. You will lose during Zero bets when bust is at 0. You win nothing.

ShennagigansDN - July 28, 2017, 10:27 pm

I think we've all known for a while Ryan has a bust button. He admitted it in chat a while back..

Arkks - July 28, 2017, 10:32 pm

wow if ryan has a bust button then im never going on busta again

SirNX - July 28, 2017, 10:33 pm

(Jul 28, 2017 10:32 PM)Arkks Wrote: [\[CITE\]](#) wow if ryan has a bust button then im never going on busta again

Run my strategy. This page on HackForums.net is not submitted to Google Search Engines.

Knucklez. - July 28, 2017, 10:38 pm

(Jul 28, 2017 10:32 PM)Arkks Wrote: [\[CITE\]](#) wow if ryan has a bust button then im never going on busta again

Ryan doesn't have a bust button. I doubt anyone with a "bust button" would let someone win \$500,000 knowing they could just leave and not comeback.

Arkks - July 28, 2017, 10:38 pm

(Jul 28, 2017 10:33 PM)SirNX Wrote: [\[CITE\]](#) Run my strategy. This page on HackForums.net is not submitted to Google Search Engines.i dont have the bank roll to use it.

Care to provide any actual proof that he does this and that this method even works?

I've never used Bustabit and never plan to but you can't make wild assumptions without proof.

Proportionately, 1,000,000 with 444 is roughly 2500:1, so having 2500:1 would be equivalent but at lower stakes..

(Jul 28, 2017 10:38 PM)Arkks Wrote: [\[CITE\]](#) i dont have the bank roll to use it.

Good, stay away I played for a bit and got burnt xd

This proof and math is provided in respect to Arkks.

Giga - July 28, 2017, 10:56 pm

(Jul 28, 2017 10:47 PM)SirNX Wrote: [\[CITE\]](#) This proof and math is provided in respect to Arkks.

That is not proof of anything.

SIM-3467872 - July 28, 2017, 11:05 pm

I would advise to avoid bustabit at any cost you will loose money there most likely no script will work as ryan is controlling all the bets.

4158996621556 - July 29, 2017, 1:19 am

(Jul 28, 2017 10:42 PM)SirNX Wrote: [\[CITE\]](#) You are a fucking idiot! I said you need to have 1,000,000 bits in your account. Betting bellow 444 bits. Do the math skid!

See this guy is smart. ???

You need 1,000,000 bits?

Well I don't think that's enough since after the 5th loss you would already have bet over 1 million

bits...

Vana - July 29, 2017, 1:43 am

To those saying Ryan controls the outcomes of the games...

You can cryptographically verify the entire game history using a game's hash:

<https://jsfiddle.net/1L1uqcgv/6/embedded/result/>

Just because you lose doesn't mean it's rigged.

Ezechiel - July 29, 2017, 2:53 am

this is just a martingale betting strategies guys, you'll never beat the house...

gambling is old asf, why do you people keep thinking you will discover an unique winning strategy ??

Vape. - July 29, 2017, 2:57 am

Can I scale this down with 100k bits or maybe even 10k? Is that possible?

SirNX - August 5, 2017, 3:38 am

Hmm.... :D :D :D

GoFlex - August 5, 2017, 4:29 am

If it doesn't go above 1.3x 5 times then you've lost.

Just use a simulator and see how this doesn't work: <https://stenlan.github.io/BaBSS/>

It's luck. There's no 'winning strategy'. Bustabit is great for short-term and having a go, but you'll lose at some point - It's just whether you give up before you lose.

SirNX - August 5, 2017, 4:33 am

(Aug 5, 2017 04:29 AM)GoFlex Wrote: [\[CITE\]](#) If it doesn't go above 1.3x 5 times then you've lost. XMR - August 5, 2017, 11:19 am

Proof of fairness for game 4,275,135:

<https://www.bustabit.com/game/4275135>

Server seed can be found at the bottom of the page.

The server seed is c8676cd23d97d2c31513acb138f998d5bc6f29788904d71141032fe4da197760.

This game crashed at 4.35x.

We do HMAC-SHA256 to get the hash. The key is the hash of bitcoin block 339,300 as stated in the Bitcointalk thread here: <https://bitcointalk.org/index.php?topic=922898.0>

Proof:

<https://blockchain.info/block/000000000000000007a9a31ff7f07463d91af6b5454241d5faf282e5e0fe1b3a>

Code \$ echo -n "000000000000000007a9a31ff7f07463d91af6b5454241d5faf282e5e0fe1b3a" | openssl dgst -sha256 -hmac

"c8676cd23d97d2c31513acb138f998d5bc6f29788904d71141032fe4da197760"

(stdin)= c59ce95b7a13ae56568baa2ad929b15e74713da23d12dbc648b6f292182f04cd

The resulting hash is:

c59ce95b7a13ae56568baa2ad929b15e74713da23d12dbc648b6f292182f04cd

The result in base-10 is:

89382869886119051256414341480222612482893305910122548236360635100356401890509

This is not divisible by 101, so it is not an instabust.

We take the 52 most significant bits from the hash (13 characters because each hex character is 4 bits and $52 / 4 = 13$):

Code \$ echo "c59ce95b7a13ae56568baa2ad929b15e74713da23d12dbc648b6f292182f04cd" | cut -c -13

c59ce95b7a13a

The resulting string is: c59ce95b7a13a

The result in base-10 is: 3476443530502458

$2^{52} = 4503599627370496$

Now we determine the crash point by the following formula (found on Bitcointalk thread above) and rounding to 2 decimal places:

Code floor((100 * e - h) / (e - h)) / 100

Let h = 3476443530502458

Let e = 2^{52} or 4503599627370496

floor((100 * 4503599627370496 - 3476443530502458) / (4503599627370496 - 3476443530502458)) / 100

floor(446883519206547142 / 1027156096868038) / 100

435.06875 / 100

4.3506875

Round to 2 decimal places, we get the crash point of 4.35x.

Game verifier (open source): <https://jsfiddle.net/1L1ugcgv/6/embedded/result/>

If this applies for one game, why wouldn't it apply for the others? If Ryan had a "bust button" and used it on a select game, it wouldn't be provably fair and would not be able to be verified. I'm sure the games on Bustabit are regularly verified by a third party to ensure no funny business is taking place.

Meanwhile, you claim things with no proof in order to spread FUD and advertise your shitty method.

Doesn't matter if I run for 120 minutes or 2. As soon as you start the script you could land on that bad streak and lose it instantly.

Hash is defined how. Get to the basic math. Realize how hash is being picked. Start from fresh start.

You do know it works both directions?

Do you have any idea what I'm saying? You could start the script settings as soon as that streak starts. Hash has nothing to do with this.

We can agree to disagree. I calculated this one 10 times over.
