Thread: [Help with OpenVPN GUI](#)

IcayeHot - July 29, 2017, 3:03 pm

I've recently tried to use OpenVPN, and when i press connect to my server, notihng happens at all, absolutely nothing, no matter how many times i press it, i've tried disabling my fire walls, and my AV, as well as deleteing all configs, as well as reinstalling openvpn as well, and still same thing notihng happens when i rpress connect, an i know a gui is suppose to open, after i press connect, and ask for my credentials, and no logs get left either, so i can't google it, i just really need help.

I'm on windows 10 64 bit

Edit: i launched it through CMD and found a error

Sat Jul 29 18:06:02 2017 NOTE: FlushIpNetTable failed on interface [6] {} (status=5) : Access is denied.

Sat Jul 29 18:06:02 2017 Failed to add persistent sublayer (status = 5)

Sat Jul 29 18:06:02 2017 Blocking DNS failed!

Sat Jul 29 18:06:02 2017 Exiting due to fatal error

Flopppy - July 29, 2017, 4:55 pm

"(status=5) : Access is denied.

Never used it myself and I'm most likely underestimating you, but are you running it as root / administrator?

n_n_an - September 11, 2017, 7:13 am

Have you fix that?

I have tried run openvpn as administrator but nothing changes

n_n_an - September 16, 2017, 6:08 pm

okey, i have fix it up by using linux
