Thread: [Can't figure out top dropdown](#)

FaberCastell - July 30, 2017, 3:43 pm

So basically when you go to the site <https://satoshibakery.com/> and then minimize it , in the right bottom you can see that thing, and i would like that when i click it, the dropdown appears

ofcourse the html site is already written, but i can't figure out how would i create the code for the top-dropdown that is probably already designed. Any ideas?

I tried just replacing `data-target=".top-collapse"` with `data-target=".sidebar-collapse"`, but it looks like shit on mobile

If you're using Bootstrap, see Collapsing The Navigation Bar at the bottom of [here](#)
Otherwise, you'd need JS to toggle a mobile menu. Something like (in jQuery);

PHP Code

```
<?php
$(document).ready(function(){
    $('#idforcollapsebutton').click(function(){
        $('#idforhiddenmenu').toggle();
    });
});
```

If you're using Bootstrap, do you have jQuery and the bootstrap javascript file both at the bottom of your HTML document? It seems like they aren't linked which would be why nothing is happening when you click on it.
