N?ght - July 30, 2017, 8:35 pm

SINCE BTC IS SO HIGH IM STILL WILLING TO GIVE DISCOUNTS. I WILL BE LAUNCHING A BETA SITE SOON AFTER A FEW MORE SALES

STOP MSGING ME AND SAYING ITS THE PUBLIC SOURCE BECAUSE IT ISNT, READ MY THREAD DESIGN

ADD ME ON SKYPE! [live:thenewseller](#)

People that bought the source so far!

Admirably:

Still Selling Lots more copies!

Even though I am selling the source code and many sites have been started without Ryan (bustabit owner) permission, you will not be under the bustabit license text file. I attained this source code without agreeing to any terms and am giving it out to the public for a lot cheaper then what the owner sells it because 2 BTC is absurd. Even if you dont want to start a site you can still look for vulnerabilities and be paid 10 btc from the owner himself :)

How is this the same as selling one script? This isnt a BAB gambling script, this is the source code that was USED to create bustabit, csgocrash, zcrash.io. This source code allows you to create a bab clone with out doing any of the programming yourself.

Theres a reason the owner sells it for 2 BTC.

Meh whatever, that doesnt mean shit. Ive seen many sites that dont have the license still operating making thousands of dollars.

Plus you dont have to use the code you can grab it to look for vulnerabilities (which was promised to be paid 10BTC if you find any by the owner of BAB)

Mainly discounting it because the price of BTC went up very high. Ive always been selling for around 300-750\$. Since the day I made this post :) Most actually bought from 0.05-0.2 BTC, the more you spend the more I help :)

Users who bought:

The leaked copy is a script for bustabit gambling, not the source code behind bustabit. completely different :)

N?ght - December 2, 2017, 12:10 am

Last one is being sold for 0.03 BTC message me on skype huge potential to make moeny with this source :)

Also auctioning off everything I have all methods + signature + thread design + ownership of the code for 0.795 BTC

How much effort would it take to add BCH/ETH/XMR or any other altcoin as deposit/withdrawl option? BTC is the worst crypto for small transaction sites like this and I guess it won't change any time soon.

As you seem to have knowledge of the code, could you do that for a extra fee?

Not me specifically, but I can get you with my developer who could help you. It isnt hard to do it at

all, it just depends on the work you want to put into it. For example all you would have to change is the depositor (btc) to the things you need for whatever currency

If you want then you can change the frontend , and everything just depends on the work you put

You have three "vouches", and the majority of your selling points are that your MD5 checksums are different and your filesize is larger.

Not only that, but the person who wrote the original source seems to have no idea what AGPL v3 is, so I wouldn't trust the quality of this code either way.

Do you have any proof of quality, any proof that this actually works, and any proof that these supposed "vulnerabilities" are fixed? As well as proof of concept of exploitation on the original software to make it seem like your outrageously overpriced software has any benefit at all?

No screenshots of the site.

Did you update the code to ES6?

I don't mean to sound like I'm shitting on your product because in the end I have not tried it, so I can not say whether or not it is legitimate or illegitimate, but you don't make any proper selling points for your software.

GlwsHey homie

I completely understand where you coming from. Its good to be very weary of all sales here on HF

and I dont blame you. Let me answer some questions

Three "vouches" yes because most people that buy them tend to surprisingly be newbies who just want the code then never msg me again.

These are each vouches where I can prove that they recieved the code and analyzed it, I even gave a vouch to admirably to confirm I was not scamming.

This code is worth 2 BTC so if you compare my price to it it isnt so outrageous. This is for the people who need it, and most are willing to pay the price.

I am not experienced with the code, it is the exact code used that is currently on bustabit.com no need to update anything.

I am also fine with using a middleman, you can analyze the code yourself before I recieve the funds. thats how confident I am with this code

In terms of a site , I tried got scammed by a dev and am too lazy to create one. This product is for specific buyers not your average joe. They know waht they getting into

If you have any other questions feel free to ask

LOOOL this kid is salty because I called him out for scamming. Lets show the screenshots, yes I was being an asshat because I hate kids that waste my time. I dont understand Im not wasting my time proving to you its real when Im ready to use a middleman and I have over 10 people who have bought this and not a single one has gave me bad rep. Come on no need to sales trash because you are a little mad

its not your code to begin with.

lol i didnt take the public code. please educate yourself once again. theres a reason why this code was being sold for 2 btc at the time i listed the selling, bug fixes and new code to something like this is a BIG deal.

when you start a gambling site im sure you wouldnt want flaws where someone could steal all your money lol. i think its a pretty big deal which is why ive sold over 20 copies.

now go sale bash someon else

stop trying, you are contradicting yourself. "you took a public code , added a few things.." "its not your code to begin with..." choose one mate
