Thread: [\[ACHelper\] An application to help Autoclicker Creators create better Randomization](#)

AllHax0Skills - July 31, 2017, 6:59 am

Hello!

Today I am supplying something called ACHelper, it is basically just something I put together in ~15 minutes (with distractions) and the code is fucking disgusting lmao. Anyways using this tool you can see the Standard Deviation, Mean, Range, Mode and Average CPS of your autoclicker and all those good thingies

I would put this onto the forums of leaking but like 99% of the replies on there include the word "thanks" or are just someone elses reply copied and pasted.

Download: <http://www.mediafire.com/file/o361z7dngz5cz8x/ACHelper.jar>

How to use:

Instructions ([Click to View](#))

1. Download File
2. Put the file anywhere on your computer
3. Run the Jar File ACHelper.jar, a CMD window should open along with the Java GUI and that CMD window will show you the time in milliseconds since your last click, you can also press the Mean, Range, Mode and Standard Deviation buttons and you will be supplied with an answer respectively!

Pretty sure the GUI isnt even centred properly but who cares lmao

Inspired by LordPancake from his autoclicker post telling you to record the intervals between your own clicks for better result.

EDIT: I also wouldnt mind criticism aslong as it isnt you telling me to shove a fork up my ass or telling me my code is fucking awful trash

EDIT 2: Github <https://github.com/Koupah/ACHelper>

Never really used Github before so mind my bad choices in settings and I have no clue what to do for .gitignore so I did java lmao

Enjoy!

TechniqueGott - July 31, 2017, 8:17 am

virus total? If it's legit, nice release

foddermc - July 31, 2017, 8:41 am

id much rather see a github link than a jar file. If you really want people to use this then create an open source git repository and showcase installation plus usage inside of a wiki.

AllHax0Skills - July 31, 2017, 2:42 pm

fodder I was considering doing that but it was 2 am when I uploaded

Ill quickly do it now before I go to school

EDIT: @foddermc done the github, I can make a video later but I am AU so my internet is horrible so I shall add instructions into the main post

> "shove a fork up your code"

Mayski - July 31, 2017, 5:07 pm

Sounds like a good idea, but as one of the users said make a Github

GenericSkid - July 31, 2017, 6:07 pm

Y'all didn't even read the thread. He edited in the github nearly 2 hours before both of your responses.

I'm fairly sure the guy shitting on the code posted his reply before OP updated with the github. Correct me if I'm wrong.

EDIT: Look at the OP, the first edit is talking about the criticism and the second one is posting the github.

AllHax0Skills - July 31, 2017, 11:00 pm

I added github after fodder suggested it and before anyone could reply after me and him

I'm going by the edit dates, OP's last edit is before wither of your posts. Unless HF backend is fucked up, edit date says otherwise. ?

Anyways OP. Pls format your code. Its hard to read.
