Thread: [Bitcoin, Bitcoin Cash, and Splitting: How to spend BTC and BCC safely](#)

minimalist - July 31, 2017, 6:56 pm

After the fork in about 12 hours, you will see that you have an equivalent amount of BCC (Bitcoin Cash) in your BCC wallet as you do in your BTC wallet. While they will be independent of each other, they share many similarities. These similarities enable a transaction from one coin to be valid on the other's blockchain...which is bad. Fortunately, there is some protection in place to prevent a replay attack on you.

Replay attack: An attack where a valid transaction on one blockchain is rebroadcasted and accepted into the other blockchain, enabling the recipient of the original transaction to receive both BTC as well as BCC.

Bitcoin Cash has replay protection that works by preventing transactions with a specific OP_RETURN message from being accepted into the BCC blockchain. However, it's good practice to take preventative measures...just in case.

How to prevent this from happening (works by separating BTC & BCC outputs): Split your coins... Send BTC to an address you own

Import BTC private key/seed into BCC wallet

Send BCC wherever you'd like

or Buy BTC after the fork, send to your BTC wallet

Sweep this wallet into an address you own

Import original BTC private key into BCC wallet

Send BCC wherever you'd like

Important...Don't trust people who will offer to split your BTC/BCC for you.

Don't send BTC/BCC without splitting your coins if you don't know what you're doing.

Some programs will be created to split your coins, but wait until they are reviewed.

Don't be impatient in hopes of getting the best possible BCC sell price.

GrandpaSherman - July 31, 2017, 6:59 pm

High quality tutorial my mans keep it up!

itsmemario - July 31, 2017, 7:16 pm

quick question can i still transfer btc to my ledger?

if i purchases bitcoin from a marketplace right now am I safe to withdraw to my hardware wallet?

minimalist - July 31, 2017, 7:16 pm

(Jul 31, 2017 07:16 PM)Biglez Wrote: [\[CITE\]](#) quick question can i still transfer btc to my ledger?

Don't hate me for asking ;(

I think that LBC will allow BCC withdrawals but don't quote me on that.

It's hard to say whether or not big blocks > segwit, but segwit has more support.

DuguWudi - July 31, 2017, 11:57 pm

If I dont sent anyone any btc/bcc coin for now, would you say I'm safe for now since I decided to let both coin balance stay in the same wallet after the split?

GhostLikesToast - August 1, 2017, 12:12 am

I'm a little bit confused on 1 factor when it comes to this BTC/BCC fork:

If, for example, I currently had \$0 BTC and waited til after the fork and then used \$1000 to buy BTC. Are you saying that I can then "split" my \$1000 worth of BTC and basically get the equivalent amount of BCC(Amount of coin, not coin worth) for free? That can't be right...

Someone please bless me with the clairvoyance of a dumbed down explanation of what I'm talking about. It would be greatly appreciated!

~GhostLikesToast

~GhostLikesToast

If you buy the \$1000 btc after the fork, you will only get the \$1000 btc you bought, you wont have the same amount of btc equivalent in bcc. Which means you get \$0 bcc value or bcc amount.

GhostLikesToast - August 1, 2017, 12:32 am

(Aug 1, 2017 12:15 AM)DuguWudi Wrote: [\[CITE\]](#) If you buy the \$1000 btc after the fork, you will only get the \$1000 btc you bought, you wont have the same amount of btc equivalent in bcc. Which means you get \$0 bcc value or bcc amount.

That's been my understanding this whole time. Which is why this part of the OP has got me quite confused:

(Jul 31, 2017 06:56 PM)Minimalist Wrote: [\[CITE\]](#) orBuy BTC after the fork, send to your BTC wallet

Sweep this wallet into an address you own

Import original BTC private key into BCC wallet

Send BCC wherever you'd like

thx OP

You have the same amount in BTC as you do in BCC, not necessarily the same value for each.

You need the private keys because blockchain.info is not a BCC wallet.

31c6fe2dd1 - August 1, 2017, 4:23 am

I am using electroncash and was able to get my bcc. It took a while tho

Giga - August 1, 2017, 9:21 am

Super useful thread Mini, thanks for this!

Just one question, how easy would one be able to commit a "replay attack"? Like should I be worried from previous transactions I've already had (recent as 2-3 days ago) or should I be in the clear? Sorry if the question was structured weird and a bit dumb, I'm not too good with the techy-side of this stuff (as you well-know from our discussion on Ripple a while back :P)

I don't think it's something that should be taught on here.

Kill Joy - August 1, 2017, 11:29 am

Good information to whoever is trying to get some BCC.

GrandpaSherman - August 1, 2017, 11:33 am

Can you please recommend people to not use Electrum Cash? It seems super super super sketchy. Spoiler ([Click to View](#))Quote:Recommendation on how to redeem Bitcoin Cash

=====

July 31st, 2017.

Electrum is a Bitcoin wallet created by Thomas Voegtlin in 2011. Electrum is distributed by Electrum Technologies GmbH, a company registered in Germany, using the website <https://electrum.org>

Electrum users who are not interested in Bitcoin Cash do not need to worry nor to take any particular action. The following note is only for users who want to access their Bitcoin Cash (BCC).

"Electron Cash" is a fork of Electrum for Bitcoin Cash. Electron Cash is not endorsed by Electrum. It is open source, and binaries (executables files) are available for Windows, OSX and Android. However, when you run binaries instead of source code, you have no guarantee that they match the source code. This is why wallet binaries are usually signed by developers. A digital signature engages the responsibility of the person who signs.

The person who distributes the Electron Cash binaries has decided to remain anonymous, and uses the fake name "Jonald Fyookball" in order to sign Electron Cash binaries. Thus, if these binaries contain code that is designed to steal your bitcoins, the author of the theft will be anonymous and walk away safely with your funds.

This danger is exacerbated by the fact that the default behaviour of Electron Cash is to silently copy all your Electrum wallets into its own directory. Thus, if you run Electron Cash on a machine where you previously used Electrum, all your pre-existing wallets will be available in Electron Cash, and you will only need to enter your password in order to expose your bitcoins to potential theft.

Therefore, users who want to run the Electron Cash binaries should do it on a separate same machine, that does not have their Bitcoin wallet. We recommend to proceed as follows:

1. Install Electron Cash on a machine that does not have your

Electrum wallets.

2. Wait until the BCC hard fork has taken place, and a few BCC blocks have been mined.
3. Move all your Electrum funds to a new Electrum wallet. This will move only your BTC, and not your BCC, because the BCC blockchain has replay protection. Wait until the transaction is confirmed.
4. Enter the seed of your (now empty) old wallet or private keys in Electron Cash. Since the BTC have been moved to a new wallet, entering your old seed in Electron Cash will not put your BTC funds at risk.

Following these 4 easy steps you will be able to access your BCC without compromising your BTC.

minimalist - August 1, 2017, 11:59 am

(Aug 1, 2017 11:33 AM)GrandpaSherman Wrote: [\[CITE\]](#) Can you please recommend people to not use Electrum Cash? It seems super super super sketchy.

If you want to sell your BCH soon then you need to get your private keys and import them into another wallet that currently supports BCH.

However if you just want to hold your BCH as well as your BTC just wait for Jaxx to add BCH wallet and credit you your coins. I would advise this option as there isn't much information on BCH and available wallets.

universalas - August 2, 2017, 7:13 am

Yesterday somewhere I saw an article and basically it was saying, If we bought 1 Bitcoin 3-4 years ago, we could be millionaires. Is that true guys, what do you think? I have never been that much into crypto currency but the past week or two I started reading and getting to know what's all about.

RoubaL - August 2, 2017, 12:43 pm

Oheyyy , Any good an trusted wallet that support BCC ?

severos - August 2, 2017, 10:03 pm

Is there a limited time of when we can claim the BCC ?? or it can be done whenever (even after a year) ?

Zettabit - August 3, 2017, 2:06 am

Why is it every time I try to access BCC from my PK's from my BTC wallet it keeps recognizing the BTC transactions as BCC transactions? The screenshots are Electron Cash after I import my PK's from my BTC wallet(s), even though the transactions were made using BTC (Bitcoin Core in the first screenshot, and Electrum in the second screenshot).

<https://www.bitcoincash.org>

(Aug 2, 2017 10:03 PM)severos Wrote: [\[CITE\]](#) Is there a limited time of when we can claim the BCC ?? or it can be done whenever (even after a year) ?

Nope.

(Aug 3, 2017 02:06 AM)Zettabit Wrote: [\[CITE\]](#) Why is it every time I try to access BCC from my PK's from my BTC wallet it keeps recognizing the BTC transactions as BCC transactions? The screenshots are Electron Cash after I import my PK's from my BTC wallet(s), even though the transactions were made using BTC (Bitcoin Core in the first screenshot, and Electrum in the second screenshot).

As you can tell from the first screenshot, I had control of my BTC before the fork, so I'm not sure what to make of this situation...

Electrum -> screwdriver on bottom right -> network -> find the shorter list of servers in the scrollbox
-> right click a server and use it

Are they done being buggy yet? Been meaning to start using BHC wallet so I can get rid of the coin.
Currently trying to update Bitcoin Classic wallet... 7 years behind -_-
