Thread: [Tsukiri's Macro Exploit & Builder Service \[PRIVATE\]](#)

Tsukiri - August 1, 2017, 5:26 pm

Hello,

I've coded a private macro and I'll start reselling builds as of today.
I'm also willing to sell the builder. The prices will be as listed below.

- A single build -> 50\$
- A rebuild -> 35\$
- Builder -> 200\$
- The builder source-code + resale rights -> 1000\$

My macro is completely coded from scratch and I guarantee its uniqueness.
It stays undetected for longer times due to it being private.

The only detection at the moment is Nano, which detects the 'shell' command in the code. I have yet to find a way to successfully bypass that detection, but earlier attempts only raised the detection rate. But since nobody on earth uses Nano, it's practically FUD.

It's also perfectly sendable through e-mail (GMAIL does not block it, however, after some time it will start recognizing the file, at which point you need to regenerate a new macro).

The builder has the following features:

- Macro generator
- USG (every time you generate a macro, the output will be different. String names are randomized to prolong the FUD-time. Also, once GMAIL recognizes your file, simply regenerating a macro will successfully bypass it)
- The possibility to enter your self-chosen numerical encryption key
- A random encryption key generator
- Ability to save the file on the victims PC under a name you choose.
- An XOR encryption/decryption engine

Video demonstration of the builder:

[Video: <https://vimeo.com/228557607>]

Most recent viruscheckmate scan:

<http://nodistribute.com/result/k8L9ndAcJvj3fEQi0> (I know, but I ran out of viruscheckmate funds x))

Has been FUD like this, even though I used it for massmailing atleast a couple of thousand times.

I will refund the builder once it gets detected by more than Nano. I'll probably find a way to bypass Nano aswell, because we can all agree on the fact that 0/40 just looks delicious.

T.O.S.:

1. No refunds.
2. Trying to reverse engineer, copy or crack any of my content will result in a scam report and a blacklisting from my service. You will also lose any product you've paid for.
3. The time the file I deliver stays undetected is decided by many factors, but mostly, by your spreading. I can have days of FUD-time, even when mass spreading.
4. If you buy a build, test your payload before sending it to me. I do not hand out rebuilds because of stupid mistakes.

To contact me, send me a private message or add me at jabber (tsukiri@exploit.im)

Have a nice day!

The GUI was modified a bit, the newest version of the builder looks like this:

<http://prntscr.com/g373rg>

As you can see, it now has the possibility to generate a random encryption key or enter your own encryption key.

Also edited the macro source a bit to make it more unique again.

Vouch copy given away (check this thread, wasn't upgraded yet so had to post there:

I'm still selling boys, get it today!

As the video was from my other thread, I couldn't post here directly because I was not L33T at the moment of making the video.

I've added an VirusCheckMate scan aswell, a more recent one.

Also, reFUD it today and made some adjustments to the code, 1/40 Nano only again.

Sales are open, first 3 sales will get a macro for just 55\$. ?

Yo, let's continue in PM.

UPDATED THE BUILDER!

- Added option to add text & remove the picture upon enabling content
- Redesigned the GUI
- Spoiler ([Click to View](#))
- Updated the code to prolong the FUD-time

Latest scan: <http://nodistribute.com/result/qgeaTsrz6FW82oU>

SOON TO BE ADDED:

- Deeper USG
- Ability to choose different drop-locations

PM me to purchase. ;)

Updated the video in the first post with a demo of the newest version in action.

You are clueless.. I have been absent for a month on this forum due to a ban for a silly troll post. I don't exactly remember if I even dealt with you (did you change your name?) but if you paid for the builder then you did receive it.

The builder is working and I am fine proving that to a customer or trusted user through TeamViewer.

Last month while I was absent, I got the builder upgraded.
It now has the following features added:

1. .DLL Payload
2. Runtime detections fixed (<https://dyncheck.com/scan/id/10816cf53459611eb165814190e13444>)
3. Scantime 0/40 (<http://viruscheckmate.com/id/JfghNb2wkhMA>)
4. Fixed an issue where the builder would sometimes generate a non working payload.

To buy, send me a PM here or on jabber (tsukiri@exploit.im).

Screenshot of the newest builder: <http://prntscr.com/gib9xp>

Have a great day.

Is it compatible with darkcomet rat?

Tsukiri - September 29, 2017, 3:44 am

Still 0/40. Removed support for .DLL files because it was annoying as hell to reFUD. Added multiple execution methods.

Add me on jabber to purchase.

Are you mentally challenged?

I literally told you that I'd help you another time on Skype since I am very busy in real life.

I even set it up for you through Skype.

Instead of saying it doesn't work, wait for me to contact you and look into it. Also, I don't bother giving any support atm. since it needs to be updated.

As soon as I updated the builder, I will hand it out to all recent customers (as I think they deserve that since the builder got a nasty detection just after some sales).

I have already told you I would help you later. If you continue trashing this thread, I will simply terminate your license. Consider this your one and final warning.

I do not have the time to work on the builder right now, which is unfortunate, but someone which can be expected since I am not a full-time developer.

Just wait it out and you will receive the update eventually. Sorry for the delay but it cannot be helped.

Yes, my service is still running. However, I am busy in real life so it will take until the end of the week for me to recode the macro to bypass everything again.

At this moment, it gets caught by Windows Defender on Windows 10 when downloaded through Chrome. It will take me some time to recode it because it is

a main function of my macro which has become detected, so I will have to find something to replace it (normally a reFUD would cost like 5 minutes, except when something like this gets detected..). I simply don't have the time to do so now, very unlucky that it had to get detected exactly now after all these months..

Anyone who purchases while it is not FUD will ofcourse receive the newest update once I have finished it, please, do not worry. I guarantee that you will get your macro delivered just like I advertised, and I am very sorry for the delays. Please bear with it, I will make sure you guys won't regret having purchased my stuff soon.

Thanks a lot for the understanding.

Hi Tsukiri,

There is a doc file that many people want... what i plan to do is, buy your builder and then make file and share to victims who already want the file. In that case they have high likelihood of opening.. also i dont want to fool them by not giving anything.. so i will actually give them what they want and that will build trust in thier minds so next time when i again share they will already be trusting.

So my questions are:

1. Can i bind this with a 20 page doc file that i already have ready ?
2. Can this be used to share my FUD crypted betabot botnet file ?

Thanks. Also i follow your other posts on HF.. amongst innumerable trolls and skids... you are one person i felt has genuine knowledge.. great work mate !

[23:10:31] Macro: (3:10:15 PM) Tsukiri: 2k/bin
[23:10:32] Macro: 2k
[23:10:40] Macro: But if you get both loader and macro builder we can make a deal
[23:11:01] Great: how?
[23:11:16] Macro: if you buy both
[23:11:20] Macro: i can give discount
[23:11:36] Macro: builder + macrobuilder for 1600
[23:11:42] Macro: thats 650\$ discount
[23:12:14] Macro: so
[23:12:14] Macro: its a private loader
[23:12:16] Macro: no detected shit
[23:15:16] Great: Alright, but for now i have to good for macro and before month ends i will be able to arise the 1400
[23:15:28] Macro: cool
[23:17:03] Great: But i hope macro can work with # and netwire
[0:50:54] Macro: yea.
[0:50:55] Macro: it can work
[0:51:01] Macro: but # and netwire arent great
[0:51:11] Macro: i 100% recommend a custom loader.
[0:54:50] Macro: Nope
[0:54:59] Macro: I dont ofcourse, I am sellin malware.
[17:24:00] Great: Send me ur btc acc
