Thread: [Primedice - Share your wins](#)

Retrox - August 3, 2017, 9:14 am

Alright guys, I've won a few bucks from Primedice the last few days.

Spoiler ([Click to View](#))

etc.

After all of that crazy luck I decided to bet modestly. I put 100k satoshi on an alt and I'm betting with a 250 base bet with 20% increase on loss with a 6x payout. Here's what's happened since I started making this thread.

Any other Primedicers here?

The founders created another BTC gambling site with more games that's fun, but not something I can profit on - <http://stake.com>

ahh, shit man, that sucks. I recommend starting with at least 500k, and playing it cautious on 30%. I've made quite a bit of money on that site, I just have the tendency to go too far, and want more. ? A couple of buddies dropped by and that popped my little bubble of luck, and it was downhill from there. It was like all the magic in the room was gone, but I didn't notice until after I was broke.

could have done a lot with 6-700USD. xD ah well. back to monetizing. ?
