Thread: [reCaptcha in my program](#)

Amyzing - August 4, 2017, 1:52 am

Hello guys,

I just wanted to know how you could implement a reCaptcha in a program that people can solve and then send the results of that to the real reCaptcha on a website to solve it.

Anything is appreciated. I have been searching for this but have come up empty handed.

Emulate a browser, send cookies back and forth.
