Thread: [Source Code For Instagram Username Checker \(Incredibly Fast\)](#)

OGGOD - August 4, 2017, 5:37 am

Selling my source code to my Instagram Username Availability Checker.

It scans 1K words per minute. It is incredibly fast! Has the option to automatically register Instagram names which are not taken. It has the option to change current instagram account's username to available username.

It scan scan 100K usernames pretty easily. Really good to get OGS and semi OGs which are not taken.

Seeing what offer i get for the source. Otherwise i'll just sell the checket on here.
If anyone is interested offer me. I'll probably make Snapchat and Twitter checker next.

BBSimmons - August 8, 2017, 10:32 pm

My checker gets 1k a second dude lmao.
