How to By pass SMS/Phone verification 100% Free

Hello all, welcome to my 2nd tut here on HF hope you enjoy!

Many sites now require a phone verification to help combat spam and people making more than one account. I recently found a great app to avoid giving away your real phone number to verify your account.

NOTE: you will need a android phone or blue stacks(www.bluestacks.com/)

Head on over to the google play store and get the app "textPlus: Free Text & Calls"
Here are the steps to set it up:

1. When you start the app you will be asked to create an account, Just put in BS info there is no email verification required.
2. Select the three lines to view your profile, then select the "get new number"/"customize my number" button
Pic ([Click to View](#))
4. Select "FREE"
Pic ([Click to View](#))
5. Now select a state important: Only some states work, and others have very limited area codes. From what I've found Texas has the most so select that.
Pic ([Click to View](#))
6. Select an area code then select "Get Custom Number" then "OK"
Pic ([Click to View](#))
7. Then Solve that CAPTCHA
Pic ([Click to View](#))

Now input that number in to any site and you will get a message in the app (View messages with the text bubble icon on the top). You can receive unlimited texts/calls.

I hope this tut helped you, If you have any tutorials you want make feel free to PM me.

-Greg

Tried using this to verify an alternative gmail account; sadly didn't work.

idkausername1234 - August 5, 2017, 6:43 pm

This doesn't work with fb either, looks like it blocks some sites. Thanks for taking the time to make

this tutorial though :)

Greg8Tacos - August 7, 2017, 2:06 pm

Thanks for the input! It worked to verify some sites for me.

cryptoshell - August 7, 2017, 11:33 pm

thanks

nice share there sir

Horus God - August 7, 2017, 11:34 pm

Thanks for share, keep going :)

Rustyoldtruck007 - August 8, 2017, 2:15 pm

I've been doing these methods for years, sadly they've been catching up with us. appreciate the time it took to make this tutorial

Yes I mainly use this for smaller sites as they do not have filters to block these apps. Thanks for the kind words!

Very limited in regards what you can do with this number. Pleass test and list services you can use it with next time. You guys can also use TextNow apk which does not require credits! PM me with questions.

jvez21 - October 5, 2017, 2:58 pm

Thanks man, i'll try :) :)

mariasimmons99 - *October 16, 2017, 12:10 pm*

Thaaaaank uu maaaaan!!!!!!!!!!

qingque - *February 12, 2024, 12:21 pm*

cool cool thats very great to know fr

cam667 - *October 27, 2024, 8:03 pm*

thx dor that is good bro

RedditAccountSeller - *November 25, 2024, 7:07 pm*

Really interesting, thanks for sharing.

Doorbear1000 - *December 15, 2024, 2:13 am*

thanks for the effort. Will look into it.

isntitobvious - *December 15, 2024, 10:25 am*

Doesn't seem to work with Gmail.

F2CAdMiRaL - *December 16, 2024, 12:55 am*

Tried on Facebook, didn't work my brudda.

sammy1s - *December 19, 2024, 8:34 am*

if it doesn't work for someone, use android studio with vpn and any service for sending sms
