Thread: [EMAIL SPOOFING ANDROID APP FOR FREE :pirate::pirate:](#)

Ishityounotmate - August 5, 2017, 3:10 pm

Hello guys,

I recently made an EMAIL SPOOFER/ SPAMMERR application that is working like a charm. You can send from any email to any and DIRECT to the INBOX. And now i am thinking of launching a Paid Android , Iphone And Web-Application. Please Let me know if anyone need it. PM me your skype id. I'll give it to you for free when it will be ready :)

Thanks.

Let me tell you guys why i am doing it for free. Every developer needs someone at first who could review his newly made application/software and give him his precious feedback to improve the goddamn code.

There already are good free spoofers and spammers around this forum, I doubt anyone would buy a product from a user who is new to the forum and has no reputation when there are nice free alternatives. What features does your app have?

Also if you release free review copies to the wrong people chances are that someone will start trying to reverse your code and potentially publish cracked/preactivated versions of your app.
