Thread: [Make a "BadUSB"](#)

JoshuaHotchin - August 6, 2017, 2:20 am

Hey guy!

So, I have a USB that I want to make into a "BadUSB" so that when I plug it into a computer it AutoRuns a program!

Bouzazi - August 6, 2017, 2:46 am

Many tutorials on Google.

You need a special USB to do this, one containing a micro-controller.

Here's a [list](#) of supported USB devices.

<https://null-byte.wonderhowto.com/how-to/make-your-own-bad-usb-0165419/>

your best bet

Smox - August 6, 2017, 2:52 am

Search 'Bash Bunny' on google

All you need :)

ScriptoryHacker - August 6, 2017, 5:29 am

You can't just use a normal usb device it has to be a microcontroller that can disguise itself as an input device. The closest you can get with a normal usb is making an autorun file but even then autoplay would have to be enabled on their pc.

THC - August 6, 2017, 12:52 pm

There are TONS and TONS of tutorials out there for this.

Use google and make sure you have the correct microcontroller.
