Thread: [DDL Filehosting V2 - Direct download for your files](#)

prilux - August 6, 2017, 7:39 am

DDL Filehosting is a combo list of providers that allow the upload of any type of files and make them available to download directly. This useful if a user want to share a file but doesn't want captchas or advertisement to be displayed before presenting the file to the downloader.

Because almost all free web hosting sites don't allow the upload of mp3, mp4, exe, rar or large files to their systems, a user must relay on filehosting sites to be able to share them. Most public filehosting sites doesn't provide a direct link to the file, therefore, some steps has to be made before starting with the actual download.

DDL Filehosting list provides for free exactly what the user wants, a direct link to the file. Just select the server to upload and share the files...
