Thread: [\[Script\] Free extension spoofer \[Safe\] Make a .exe looks like any file you want](#)

Skil@h - August 6, 2017, 1:51 pm

Hello guys, this script is a simple RTLO extension spoofing ([click here for infos](#))

It allows you to make your .exe file look like any file you want, it is only a visual trick, you can't send it as a .jpg for example.

How to build it : open the notepad, paste the code, save as .vbs file.

Code Call Spoof

Sub Spoof()

dim filePath,fileName,exten,FileLen,revExten,dest,NewFileName

set fs = CreateObject("Scripting.FileSystemObject")

filePath=inputbox("Enter The FilePath")

exten=inputbox("Enter the Extension to spoof" & vbCrLf & _
"Example : .jpg, .mp3 , .avi , etc..")

fileName=fs.GetFileName(filePath)

filePath=fs.GetParentFolderName(filePath)

FileLen=Len(fileName)-4

Dim spclChar

spclChar = ChrW(8238)

revExten=StrReverse(exten)

NewFileName=inputbox("Enter the new file name max 5 chars")

dest=NewFileName & spclChar & revExten & mid(fileName,FileLen+2)

fs.copyFile filePath & "\" & fileName,filePath & "\" & dest

msgbox "Extension Spoofed Successfully!!",vbInformation

end sub

For the lazy ones, you can download the .vbs file directly here :

<https://www.sendspace.com/file/zbrys1>

No need for a virus scan, since it is a .vbs file, you just have to right click and hit "modify" to see the code.

I hope you all enjoy this funny tool :) ?

Aradura - August 8, 2017, 9:23 am

Nice, works pretty well. Changing the file extension to .src first works even better. If I set the name to img, I end up with imgrcs.jpg. However, if you then try to download that file in Chrome, it's a dirty snitch and says it might harm your computer and gives you the filename: img-gpj.scr. However, this has worked for me anyway, because people are dumb.

trader_j0es - August 8, 2017, 11:15 am

Sounds good, I will play with it later

exploid2017 - August 8, 2017, 1:33 pm

Or u can try just silent exploit builder to make ur exe to PDF or doc

jay_slukky - August 11, 2017, 4:36 pm

what's your skype ID , let do business

hi you email ?

Pete_the_Paper_Boat - August 14, 2017, 11:38 am

Can somebody explain to me why this works. I have "Show file extensions" on and it works..

What?

Sorry if I sound like an Idiot.

You can use a special unicode character that reverses the filename.

This is actually a feature in most explorers like the windows one but also nautilus etc. will work as well. But checking the filename in console will show you the special character used as [] and the filename in normal direction. If you go to properties you will see however that its still an executable file.

Just be aware of files that look like this : exe.

Toxic Hacker - September 28, 2017, 3:16 am

I dont understand how to use it hmm..

ZaranTetoski - September 28, 2017, 7:08 am

Very nice work!

Thanks for the sharing!

aviator22 - September 29, 2017, 10:27 am

Great tool Skil@h thank you for share.

For the others who are looking to HIDE the exe behind a pdf file etc, you dont need a spoofer! You need an exploit. If you dont know what I am talking about, feel free to use the search button or ask :)

Bernadette vd Molen - April 8, 2022, 11:05 am

Doesn't work anymore sadly

Tandloosi - July 21, 2022, 5:28 am

This is really cool, thank you!!

rowenalucero dato - July 24, 2022, 5:30 am

This is kinda old, but i'm sure the concept can still work

binarycoder - July 24, 2022, 6:40 pm

it's an old method that has been discovered more than 10 years ago. and many antivirus block any file spoofed with this method.

HatLess - August 20, 2022, 3:58 pm

thank you for sharing the code with us :D

mutate - August 22, 2022, 9:30 am

Great share brotha. Gonna try it soon. Thanks!

maxose2 - August 22, 2022, 10:04 am

How do I go about running this, and do I need to have linux?
