Thread: [just hacked anotherone. arma 3 majour gaming community via http](#)

arma23hacker - August 8, 2017, 12:07 am

So the tital speaks for itself, i managed to root all there game servers and websites tonight via + OSVDB-3268: /cgi-bin/: Directory indexing found.

+ The Content-Encoding header is set to "deflate" this may mean that the server is vulnerable to the BREACH attack.

i will be a week or so planning attacks, laying back doors, grabbing imformation, and furthering my cause, and hacking admins computers, when i break in it takes me a few days to a week to map everything out ahahaha

also i found a ssl cert invalid date that i am able to exploit. anyway i just broke in tonight, any sugestions on what to do next the last community i hacked, i ended up banning admins and ddos ip's for weeks before they found out its me, i really wanna do alot of dammige to this server anyidea, i cant post who this is or where they located or how i broke in, but this is a majour gaming community, let the fun begin.

i have been a hacker for 11 years, i am just learning the website things of hacking, i am a pentester, i am very good at what i do, i know i get called down on hack furoms from time to times on my other accounts, but i am very good at what i do any suggestion what i should do next with a rooted gaming community
