Thread: [\[Help\] with using regex on a website](#)

Louis - August 8, 2017, 10:58 am

I've been trying to make a regex for the steam market, using these resources but it just Isn't working.

It's often better to just use a HTML parser like AngleSharp. It works out to be a lot better for parsing as it's easy to read, maintain and write.

Nah the grasshopper algorithm is far superior.

You can try use functions like this:

```
Code Public Function GetBetween(ByVal haystack As String, ByVal needle As String, ByVal  
needle_two As String) As String  
    Dim istart As Integer = InStr(haystack, needle)  
    If istart > 0 Then  
        Dim istop As Integer = InStr(istart, haystack, needle_two)  
        If istop > 0 Then  
            Try  
                Dim value As String = haystack.Substring(istart + Len(needle) - 1, istop - istart -  
Len(needle))  
                Return value  
            Catch ex As Exception  
                Return ""  
            End Try  
        End If  
    End If  
    Return ""  
End Function
```
