Thread: [Computer is bloated and memory and CPU is running high on taskmanager](#)

Nopee - August 9, 2017, 7:30 am

I need a check up.

I installed some applications and I think it's using up my resources as my task manager reports that cpu and memory usage is at 100% even with only 2 tabs in chrome open.

Please download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Note: You need to run the version compatible with your system. If you are not sure which version applies to your system download both of them and try to run them. Only one of them will run on your system, that will be the right version.

Right click to run as administrator. When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce logs called FRST.txt and Addition.txt in the same directory the tool is run from.

Please copy and paste the logs back here.

Please download [Junkware Removal Tool](#) to your desktop. Run the tool by double-clicking it. If you are using Windows Vista, 7, or 8; instead of double-clicking, right-mouse click JRT.exe and select "Run as Administrator".

The tool will open and start scanning your system.

Please be patient as this can take a while to complete depending on your system's specifications.

On completion, a log (JRT.txt) is saved to your desktop and will automatically open.

Post the contents of JRT.txt into your next message.

Honestly nothing looks bad, the only thing that could take up more resources is rainmeter. Memory is 35% which is normal, what processes are taking up cpu and memory in the task manager?

Where do you see adware exactly?
