Thread: [How To Bind 2 EXE File Into 1 Exe](#)

soloking1996 - August 10, 2017, 7:52 am

Hey guys

i need to know if there is any script can i use in kali linux os or an application on windows can help me out to bind my exe payload to another exe file, i tried to use winrar to do that but i had a virus detect from 1/35 to 21/35.

can any one help me out by sharing ?

thanks

Did you just neglect to read or investigate what i told you on essentially the same previous thread of yours?

You can find these pretty easily with google and or the HF search function.

Binders (most of the time) are fairly simple. They just hold the information of the second and third executable in the first, on execution it "drops" or "writes" that file to a relatively "hidden" location on the computer as to not interfere with the user like dropping it on the desktop would lol.

After that it launches the dropped file(s).

yotoprules - August 10, 2017, 12:34 pm

The way I do it is I hide both files in a folder, and make the folder hidden, and code a very basic application in visual basic (only 4 lines) that will launch all the files I want. It works particularly well on games since they generally have a lot of folders to hide the files in.
