Thread: [Ways to take advantage of devices on a wifi network?](#)

GoogleDocs - August 10, 2017, 5:14 pm

Hello, can any of you please point me in a direction where I can learn more about ways I can take advantage of devices on a wifi network.

I am currently living in a community where there are about 1,000 people on the extended wifi network (its the same wifi with extenders throughout the area).

Essentially, I am wondering what I can do to the devices, how I can, etc.

Also, I'd like to note that I am on a Mac laptop :(

This is my first post! Thank you to the community!

You'll need a Linux computer is some way shape or form. You can [dual boot Kali Linux](#). Start with mitm attacks. An mitm attack, in a nutshell is when the attacker pretends he is the router and therefor packets are sent to him. Try [this](#) and [sniffing images](#).
