Thread: [PC is lagging - most likely infected](#)

wit - August 10, 2017, 8:44 pm

My PC is lagging like crazy but its a fairly new build
I have some torrents on here that I probably shouldn't

Can anyone help me run diagnostics to see whats good? computer is barely usable

Not Your Average Orange - August 10, 2017, 9:27 pm

Download [Farbad Recovery Scan Tool](#) run as admin and then click scan once. Pastebin your FRST.txt and addition.txt logs which will be in the same directory that the tool was ran from. Then wait for a member equipt to read FRST logs to come and check over your logs. (Probably bromo)

I do not see any sign of malware, your computer looks clean.
Just to make sure of it, please do the following:

Download [fixlist.txt](#) file and save it to the Desktop.

NOTE: It's important that both files, FRST/FRST64 and fixlist.txt are in the same location or the fix will not work.

NOTICE: This script was written specifically for this user, for use on that particular machine.
Running this on another machine may cause damage to your operating system

Run FRST/FRST64 and press the Fix button just once and wait.

If for some reason the tool needs a restart, please make sure you let the system restart normally.
After that let the tool complete its run.

When finished FRST will generate a log on the Desktop (Fixlog.txt). Please post it to your reply.

After that do this please:

Please download [RogueKiller](#) and save it to your desktop.

- Quit all running programs.

- Right-click on the program and select Run as Administrator to start and when prompted allow it to run.
- Read and accept the EULA (End User License Agreement)
- Click Scan to scan the system.
- When the scan completes select "Report", a log will open. Close the program > Don't Fix anything!
- Post the contents of the log in your next reply.
- Wait for a trained user to tell you if you can delete what RogueKiller finds

It's possible that you have a driver/hardware problem, but I can't help you with that.

Looks good, last 2 scans:

Please download [Junkware Removal Tool](#) to your desktop. Run the tool by double-clicking it. If you are using Windows Vista, 7, or 8; instead of double-clicking, right-mouse click JRT.exe and select "Run as Administrator".

The tool will open and start scanning your system.

Please be patient as this can take a while to complete depending on your system's specifications.

On completion, a log (JRT.txt) is saved to your desktop and will automatically open.

Post the contents of JRT.txt into your next message.

Re-Scan with FRSTDouble-Click FRST.exe or FRST64.exe to run the program.

Click Yes to the disclaimer.

Ensure the Addition.txt box is checked.

Click the Scan button and let the program run.

Upon completion, click OK, then OK on the Addition.txt pop up screen.

Two logs (FRST.txt & Addition.txt) will now be open on your Desktop. Copy the contents of both logs and paste them to pastebin.com. Post the link here.
