How do I monetize my 40k Instagram account without losing too many followers?
I need suggestions, what's best to do? etc.
thanks

What have you currently been posting? Do you follow a particular topic or do you post random stuff?

Have you tried anything yet? The idea I think of requires high quality content, which can be expensive to generate, I am actually working with deep learning at the moment to generate SEO perfect articles, slap some adsense and amazon affiliate links on it and you have a sold stream, not even dependent on IG.

Sell advertisements is by far the easiest way to monetize.

I tried CPA but it didn't work out pretty well in my opinion.

How much are you expecting to earn? I could buy it from you for a nice price.
