Thread: [how can i host website without hoster having access to my source and DB](#)

LyfHax - August 11, 2017, 3:13 pm

is this possible?

i don't want my host to have full access to all of my source and files and database

NinjaLeaks - August 11, 2017, 3:17 pm

well... thats the purpose of hosting... lol

Probably is possible but idk how.

Become your own hoster.

dont you find this a bit annoying?

just the potential of intrusion of your privacy and potential leak

like they have as much power over your files and db and source as yourself

how to do this?

only option i see is buy my own physical server

Correct, get your own dedicated server.

LyfHax - August 11, 2017, 3:29 pm

you mean a physical one?

or just one from a hostingg service like ovh or smth?

you're saying the hoster has no access to the content hosted on the dedi?

Could get one from OVH yes, not like they're going to copy your files.

Charger - August 12, 2017, 12:58 pm

Just go with a reputable host. They don't care nor is your work valuable enough for them to snoop through.

Host it yourself if you are that concerned.

Also, if you use proper passwords, they aren't going to be able to get to your database.

but let me get this right

if u use a webhost they have full access to source files + Database

what about if you use VPS or Dedicated server?

what access do they exactly have to the content hosted on the server?

How about you don't host child pornography at all or whatever illegal content you're paranoid about.

Electrons - August 13, 2017, 4:14 am

I feel you mate.

Perhaps u should jus buy a vps n host everything yourself.

Try cyberbunker.

masterpill - August 13, 2017, 8:18 am

Buy a dedicated server or encrypt your files and your database.
