Thread: [Influence | Crypting Help Desk | Teamviewer](#)

TheWarOwl - August 14, 2017, 8:09 am

Thread closed. If you had any unanswered questions feel free to p.m. me.

Official Crypting Help Desk

What's this for?

Protecting your files isn't easy, but it should be. If you're having trouble that's what we're here for. We're dedicated towards assisting you with any of your crypting needs.

How do I get help?

For now just describe your problem in detail as a comment below. Because the nature of crypters, it helps to know the details of your software and crypter setup. If we can't quickly fix it that way, we can also use TeamViewer.

DESK MEMBERS

- [TheWarOwl](#)

[b3rK](#)

Were we able to help you?

Be sure to say thank you on the thread!

It's a great way to keep us going and helps us help you.

b3r? - August 14, 2017, 8:11 am

Proud to be on the team, looking forward to assisting people!

PizzaFox - August 14, 2017, 8:12 am

Thanks for helping out the community.

Anyways,

I bought [Shield Crypter](#) a while ago. It worked well until a couple days ago it wouldn't start at all (no error message, no instant-closing window, etc.). When I bought it it came with the source code as

well. The seller doesn't respond to my emails either. If you think you can help figure out why it doesn't work I will give you the files.

Thanks in advance.

bzr? - August 14, 2017, 8:20 am

That sounds like a possible authentication issue, have you tried opening the source code in an editor like Visual Studio and running it from there?

TheWarOwl - August 14, 2017, 8:20 am

Hey PizzaFox!

Just to be sure, do you mean the crypter itself won't start or the crypted file?

Also, do you know if there were any updates on the crypter during that time?

If there's anything you'd like me to look at feel free to P.M. me. Just be sure what you send won't violate any t.o.s.

PizzaFox - August 14, 2017, 8:29 am

(Aug 14, 2017 08:20 AM)bzr? Wrote: [\[CITE\]](#) That sounds like a possible authentication issue, have you tried opening the source code in an editor like Visual Studio and running it from there? I haven't. Mostly because I don't really know what file to run or try debugging.

When I ran the crypter in a Windows 7 VM instead of my Windows 10, the same thing happened.

(Aug 14, 2017 08:20 AM)TheWarOwl Wrote: [\[CITE\]](#) Just to be sure, do you mean the crypter itself won't start or the crypted file?

Also, do you know if there were any updates on the crypter during that time? I'm talking about the crypter itself.

I haven't ever seen the crypter open up any "Checking for updates" windows so I imagine it doesn't have self updating features.

bzr? - August 14, 2017, 10:34 am

From what you've told us, and I haven't used Shield before, but I would say that if there is infact a login system for this product then it's possible the auth servers are offline and your login can't be authenticated.

PizzaFox - August 14, 2017, 11:35 am

When I downloaded it it didn't give me any license or anything. That might be the problem though. Is there any way I could use it if the authentication server (if there is one) is always offline? I do have the source code as well.

bzr? - August 14, 2017, 11:43 am

(Aug 14, 2017 11:35 AM)PizzaFox Wrote: [\[CITE\]](#) When I downloaded it it didn't give me any license or anything. That might be the problem though. Is there any way I could use it if the authentication server (if there is one) is always offline? I do have the source code as well.

Interesting, maybe im wrong then. But yeah, I'm assuming it's written in the NET Framework so opening it up in Visual Studio and trying to run the project from there could be a good idea worth trying.

PizzaFox - August 14, 2017, 1:01 pm

I think the problem is that the executable I would run is like a shortcut for the actual program. For some weird reason, the actual program executable is missing. I contacted Selly support to see if I can re-download a fresh copy.

Amaan4194 - August 14, 2017, 1:06 pm

First of all, Thank you Influence for doing this. I stuck in a problem with Startup. My crypt bypassed AV and startup process also bypassed. And Startup file is in Appdata. But when I restarts my VM, It I cant see Startup procees in Task manager. And My rat also not coming back after restart.

If any of you help me with this it would be great help. ?

TheWarOwl - August 14, 2017, 1:31 pm

Hey Amaan4194!

First thing we should ask is what your RAT setup looks like. If your RAT and crypter conflict with eachother it can cause issues. Be sure that you only use startup and persistence in the crypter, not the RAT.

Once that's done (if that didn't fix it) we need to see if the executable is the issue. You should try manually opening the file in your appdata. See if it launches and report your results back to me.

Amaan4194 - August 14, 2017, 2:14 pm

(Aug 14, 2017 01:31 PM)TheWarOwl Wrote: [\[CITE\]](#) Hey Amaan4194!

Not Using any options like startup, persistence, etc in Rat, Only using from Crypter.

Manually Opening startup file from Appdata, successfully run and Rat also back.

But Only issue is reboot survive. i.e; startup process not starting after reboot.

Waiting for your response.

?

xcrafter245 - August 14, 2017, 2:22 pm

good luck Influence, hope you the best

SIM-2921535 - August 15, 2017, 12:48 am

I use codex crypter, please what does LNK startup means?

NovaHowl - August 15, 2017, 3:11 am

(Aug 14, 2017 01:01 PM)PizzaFox Wrote: [\[CITE\]](#) I think the problem is that the executable I would run is like a shortcut for the actual program. For some weird reason, the actual program executable is missing. I contacted Selly support to see if I can re-download a fresh copy.

Compile the executable from VS. That'll give you a freshly compiled exe.

TheWarOwl - August 15, 2017, 6:31 am

(Aug 15, 2017 12:48 AM)princesammy03 Wrote: [\[CITE\]](#) I use codex crypter, please what does LNK startup means?

LNK is a shortcut file. I assume it means it puts your executable somewhere and puts the shortcut to it in the startup folder.

(Aug 14, 2017 02:14 PM)Amaan4194 Wrote: [\[CITE\]](#) Not Using any options like startup, persistence, etc in Rat, Only using from Crypter.

?

I might need to take a look. It seems like a few crypters are getting there startup files detected by standard antivirus for some reason, causing the startup issue.

LiftMaster - August 15, 2017, 1:58 pm

(Aug 15, 2017 06:31 AM)TheWarOwl Wrote: [\[CITE\]](#) LNK is a shortcut file. I assume it means it puts your executable somewhere and puts the shortcut to it in the startup folder.

(Aug 15, 2017 01:58 PM)LiftMaster Wrote: [\[CITE\]](#) Literally having exact same issue if a solution is found I appreciate to hear also.

Try enabling startup in the RAT instead and leaving all the rest in the crypter.

LiftMaster - August 15, 2017, 6:53 pm

(Aug 15, 2017 05:47 PM)bzr? Wrote: [\[CITE\]](#) Try enabling startup in the RAT instead and leaving all the rest in the crypter.

I tried using IMs startup, it work but asks you if you'd like to run it when computer restarts. Using cryberseal

Amaan4194 - August 15, 2017, 11:15 pm

(Aug 15, 2017 05:47 PM)bzr? Wrote: [\[CITE\]](#) Try enabling startup in the RAT instead and leaving all the rest in the crypter.

Rat startup file getting detected.

LiftMaster - August 16, 2017, 4:02 am

(Aug 15, 2017 11:15 PM)Amaan4194 Wrote: [\[CITE\]](#) Rat startup file getting detected.

Yeah I get that which means I won't be able to use it

bzr? - August 16, 2017, 4:40 am

(Aug 15, 2017 06:53 PM)LiftMaster Wrote: [\[CITE\]](#) I tried using IMs startup, it work but asks you if you'd like to run it when computer restarts. Using cryberseal

Okay, so if the startup on the rat is being asked for user permission to run and the crypter one is detected then you're best off talking to cyber coder about when the reFud is.

LiftMaster - August 16, 2017, 10:12 am

(Aug 16, 2017 04:40 AM)bzr? Wrote: [\[CITE\]](#) Okay, so if the startup on the rat is being asked for user permission to run and the crypter one is detected then you're best off talking to cyber coder about when the reFud is. The crypter isint getting detected on my vm I have no av. The process is running in the vm but after startup it won't connect. Cybercoder basically said I'm a dumbass with to many test bots but I was ok how's that explain 100+ clients that never ever reconnected

TheWarOwl - August 16, 2017, 9:20 pm

(Aug 17, 2017 05:04 PM)LiftMaster Wrote: [\[CITE\]](#) Are you familiar with DataPro? Could use a bit of advice if willing.

Yes I have used DP before, what's up?

LiftMaster - August 18, 2017, 8:39 am

(Aug 18, 2017 03:52 AM)bzr? Wrote: [\[CITE\]](#) Yes I have used DP before, what's up?

Everytime I make a new build it keeps corrupting the file but hella presistance lol.

drillBYTE - August 18, 2017, 2:44 pm

Firstly I would like to say thanks for the "help desk" service you offer, always appreciated.

Onto the question, long story very short... Spent a little over \$150 on various crypters on here but been disappointed with the end results. Have one final crypter in mind but the asking price is a little over \$70. Is it worth spending that amount on here or a bad idea to spend money on HF itself as various people always advise looking elsewhere?

kim090802 - August 18, 2017, 3:24 pm

are you familiar with byte crypter?

From what I've seen paying for each individual crypt works better than using a public crypter, because it's alot more private.

If you're looking for a recommendation I can't really suggest any one in particular, but one that looks promising you could look here: <https://hackforums.net/showthread.php?tid=5581801>

Apparently if it's not fud, you can keep crypting until it is. Because you're paying \$10 for a FUD stub.

bzr? - August 19, 2017, 4:42 am

(Aug 18, 2017 08:39 AM)LiftMaster Wrote: [\[CITE\]](#) Everytime I make a new build it keeps corrupting the file but hella presistance lol.

Try cutting back on the features and see where that gets you. Personally if I have ever ran into problems I start again with nothing enabled and work my way up 1 feature at a time until something breaks.

(Aug 18, 2017 03:24 PM)kim090802 Wrote: [\[CITE\]](#) are you familiar with byte crypter?

Sure am.

Cool thanks, looking for a non-.Net Framework dependant one. Looking at DarkEye at the moment.

This Weekend - August 19, 2017, 6:57 am

Hi I am using Netwire along with DarkEye Protector. I've sent the files to my other computer and it seems to get detected each time. I use default settings in netwire. In DarkEye I change the file icon, bind it with a picture, and spoof the extension. Am I doing something wrong? I contacted support with no luck! Maybe you'll have a suggestion for me? My trial is running out and it's not working as advertised for me maybe because I am doing something wrong. By the way, I tested it on my computer and all works fine.

<https://nodistribute.com> is one, but you only get limited uses / day.

This Weekend - August 19, 2017, 7:48 am

The picture is in my language but basically it says "System windows is protecting this computer" when I click on it or sometimes when I click on it the file gets removed right away.

TheWarOwl - August 19, 2017, 5:40 pm

(Aug 19, 2017 07:48 AM)This Weekend Wrote: [\[CITE\]](#) The picture is in my language but basically it says "System windows is protecting this computer" when I click on it or sometimes when I click on it the file gets removed right away.

Hello! The popup you're seeing is likely windows smart screen. This happens when windows doesn't recognize the publisher.

This can be worked around by clicking "more options" and "run anyways".

There are ways around smart screen, the one's I know of typically involve signing your files or not using a .exe to launch your program.

Depending on your purposes and intentions, using a file exploit to drop and execute your program may be the best option.

This Weekend - August 20, 2017, 2:01 am

(Aug 19, 2017 05:40 PM)TheWarOwl Wrote: [\[CITE\]](#) Hello! The popup you're seeing is likely windows smart screen. This happens when windows doesn't recognize the publisher.

Yes, that's exactly the problem TheWarOwl. Can you point me in the right direction to make the file exploit? Would that be making it into a .pdf or something?

TheWarOwl - August 21, 2017, 12:42 pm

.PDF exploits as far as I know are patched. They're useful in the sense that some systems may have an older vulnerable version. Otherwise you'd need a 0-day lol.

A popular way is word Macro's. They're relatively cheap and because it isn't technically an "exploit", they'll be usable for a long time.

bzr? - August 25, 2017, 6:22 am

Service is still open. Feel free to drop a message.

SIM-82498 - August 26, 2017, 12:10 am

I was wondering which crypters available on here provide the best execution rates for SmokeLdr?

bzr? - August 26, 2017, 6:22 pm

(Aug 26, 2017 12:10 AM)Dervie Wrote: [\[CITE\]](#) I was wondering which crypters available on here provide the best execution rates for SmokeLdr?

I would recommend Nucleus or DarkEye if you have money to drop.

Cheers, I am more than likely going to side with Nucleus. Spoke with Flacon (seller) throughout the day, it seems suitable. =)

TheWarOwl - September 1, 2017, 12:02 pm

We're still open and ready to answer any questions should you have any ?

ruslan_ivanow - September 2, 2017, 9:12 am

I'm looking for a crypter that will work with Orion keylogger, should you recommend any good

options (except Spartan crypter, Kazy - which are shit) and those ones that are more expensive than ~\$20.

TheWarOwl - September 2, 2017, 4:35 pm

Hey ruslan_ivanow,

The thing to keep in mind with crypters is you typically get what you pay for. If I had a recommendation I'd recommend one time private crypts. They tend to be higher quality than public and if you got a good setup, you probably won't need another crypt.

For that, I'd recommend this crypter as personal preference:

<https://hackforums.net/showthread.php?tid=5581801>

Both private and public should be FUD, private however, will be FUD longer.

Otherwise it'll be wise to invest into something a tad more pricy than \$20, like cyberseal. Which appears to still be being reFUD. If you want something "good" that's cheap, I'm afraid that the nature of crypters can't really ensure that.

The cheapest, highest value for your buck is going to be paying for a reliable DNS service, preferably bullet proof. This won't cost very much believe it or not. Register with that DNS as many names as you can for each tool you plan on using, then purchase a few crypts for your keylogger, rat, or anything else you may have. As long as you have that DNS, you really won't need another crypt for a while, because when your IP changes you can just update the DNS names to point to your correct IP.

All that would cost around \$30 for a year, you can also get a nearly guaranteed FUD your next purchase later when it's detected as well.

Purple Kief - September 3, 2017, 5:29 pm

Don't hesitate to come ask these guys questions. Their answers will be valid.

Katsuki - September 3, 2017, 10:14 pm

When selection injection method for a native loader, is it always recommended to inject to self? Also, can crypters absolutely remove most RT results regardless of what is being crypted? Thanks.

kevy42 - September 3, 2017, 11:09 pm

I haven't messed around with self injection much, but when I crypt a native payload I always inject into AppLaunch, works great for me

TheWarOwl - September 5, 2017, 11:56 am

(Sep 3, 2017 11:09 PM)WeedmasterOG Wrote: [\[CITE\]](#) I haven't messed around with self injection much, but when I crypt a native payload I always inject into AppLaunch, works great for me

Yes, it's going to be personal preference. It depends on what your crypter has available though.

kevy42 - September 5, 2017, 12:10 pm

(Sep 5, 2017 11:56 AM)TheWarOwl Wrote: [\[CITE\]](#) Yes, it's going to be personal preference. It depends on what your crypter has available though.

My crypter has these features

- Private RunPE(inject into AppLaunch for native payloads)
- Custom NTDLL class(modified calls to evade proactives and to be able to have greater USG options for call randomization)
- Anti memory scanner
- USG(startup/file/folder/internalfile name randomizer, custom code name randomizer, fold system, junk code generator)
- Delay
- ZoneID remover
- Hidden startup(RunOnce, gono switch to Task scheduler soon to get better runtime results)

I only crypt native payloads with the crypter and its only made for my Bnet. Infact iv removed the managed payload container as im only crypting the Bnet payload thats native with the crypter. Runtime is 1/23(according to DYN-CHECK), confirmed with manual tests on 12 VMs(with internet access + reboot)

(Sep 5, 2017 11:56 AM)TheWarOwl Wrote: [\[CITE\]](#) Yes, it's going to be personal preference. It depends on what your crypter has available though.

Btw iv PM'd u about something i need a lil help with

Katsuki - September 6, 2017, 10:09 am

(Sep 15, 2017 02:55 PM)skywalker16 Wrote: [\[CITE\]](#) how can i rewrite shell code in python exploit? any tutorials??

thanks and keep the good job!

Hello, this doesn't directly pertain to this thread but I'd gladly help you. I believe you're going to want some experience with MASM or at least some form of programming language to be able to understand writing this stuff by hand.

Here's some good information on testing your code:

<https://www.corelan.be/index.php/2010/02/25/exploit-writing-tutorial-part-9-introduction-to-win32-shellcoding/>

Regarding the process itself, look here: <http://www.vividmachines.com/shellcode/shellcode.html>

Depending on your desired use as well (if you're using it in a buffer overflow scenario for example) you may want to understand how the computers memory works, IE pointers, addresses and how to

manipulate them to execute your shellcode without crashing, no op sleds, etc etc...

If you go into those a great video you can find here:

<https://www.youtube.com/watch?v=1S0aBV-Waao>

FYI, I don't write shellcode. This is just the little I know with the research I've done for you.

stimpyyoutube - September 20, 2017, 8:32 am

Can you names some crypters that work good with ImminentMonitor

(Sep 20, 2017 08:32 AM)stimpyyoutube Wrote: [\[CITE\]](#) Can you names some crypters that work good with ImminentMonitor

If you're looking to tone down the detection rates I'd recommend a private crypt or pay per crypt service. In regards to compatibility, native crypters can normally crypt .net and native, .net however can only crypt .net.

In the case of Imminent Monitor either type of crypter should work fine, if you're worried contact the seller before hand to see if they have compatibility issues before hand.

Katsuki - September 21, 2017, 4:18 pm

Hi again. In regards to Anti Memory Scan, do payloads need to be "compatible" in order to use that option through a crypter? or are most native payloads "compatible" with that feature? For example with Smoke, when I enable Anti-Memo on my crypter, the runtime scans light up like a christmas tree. When I have Anti-Memo disabled, the runtime results are miles better. Could it be the crypter or is it dependent on the file getting crypted?

Thanks!

im new in crypting whats a good app to clone for assembly?

presto.enterprize - September 21, 2017, 11:42 pm

I need a pay per crypt service for Darkcomet rat with good icon and spoofed extension. Someone pm me for deal.

Nearly any crypter you purchase will have an inbuilt clone assembly function.

I am wanting to learn how to encrypt my own rat servers and I have literally no experience in coding anything. I have watched many videos of people explaining many things about different languages but I don't really know what the best for my situation is.

I am wanting to learn how to encrypt malware to bypass any antivirus and have a clean run time and scan time.

I want to know the best language for this situation and where I can learn it at, like is there a online book or video tutorial that I can sit through. I do not have any money to spend on online classes so please let me know if there is alternatives :D

Thank you very much.

Thepoeltje - September 23, 2017, 5:59 pm

Could u help me out with a crypt?

Can you be more specific by telling exactly what you need? Do you need to crypt a RAT? Create a crypter? Decrypt a hash?

iLethor - September 28, 2017, 12:33 am

Thanks, you seem like a nice guy.

My experience with programming has been python to c# to c++. Python is great for fundamentals and practice, well documented, and lots of tutorials. Then I'd go to c# because in my experience it's easier to learn than c++. That being said, c++ or just c are going to give the best results if done correctly. C# will work fine as well, especially when you're in early stages of understanding code obfuscation and how computer memory works.

Next thing you'll learn after programming is code obfuscation, encryption and memory runtime bypasses. There's too much to say here, but you'll progress the more you practice programming and develop applications, lots of stuff on Google to walk you through everything as well.

Hi I have orcus and cyberseal, help with crypting? Greatly appreciated!

hurborro - October 13, 2017, 6:05 pm

Hello,

I have njRat and topher and also use smart Assembly 6. Still, can't get the builder to pass most

AVs. Any ideas?

Thanks in advance

What did you need help with exactly? What have you tried?

Good question. Smart Assembly sadly isn't designed to bypass antivirus, rather obfuscate code and prevent unwanted eyeballs from seeing your code. (Should remove some detection's none the less depending how the AV's signature's work)

I'd imagine Topher just needs a refud. Try changing your icon for your file (make your own preferably) pump in some random information (I believe Topher can do that), anything else you can do to change your file in little ways will hopefully get more and more of those detection's off.

Thank you very much... I'm at 7/35 atm so i'm getting there. I'll let you know when/if i manage to go FUD.

Great service btw.
