Thread: [Vindicator - CSGO External \[Aim|RCS|ESP|Glow|SoundESP|Trigger\] Unique Builds&Sale Cap](#)

UniveX - August 16, 2017, 12:39 pm

Pricing:

1 Month - 15.99€

Our site is an autobuy, PayPal is done usually within 5 minutes, BitCoin can take up to one hour as it waits for confirmations.

Payment options are PayPal & Bitcoin, whereas Bitcoin has 15% discount on every sub and every product on our page.

Vindicator offers unique builds & sale cap at 125, new build is deployed each 15-20 minutes, whereas it can be downloaded automatically within the application.

As it's new release, we push updates on daily basis & we listen to user ideas.

It's safe to use on VAC/MM. FacelT Non-Premium is supported aswell due to the fact we have both Incross & Hitbox trigger, but only Visuals are recommended.

Refunds:

Refunds are possible if hack does not work as supposed to, via contacting our staff with reason, opening a case on PayPal is not the best way to do your refund.

We take no responsibility about bans, it's about how the user uses it, if you get caught by Overwatch / Reports, we can't do much about it.

Before users say it's a c+p, you can check our previous thread, our trigger has been undetected nearly for 3 years now, ESP is undetected for 2,5 years.

[Our other thread with our hack\(s\) and vouches](#)

Unique builds:

[quote]

Every user now receives unique build every hour, you can see your build details on your dashboard, together with MD5 and build time.

Vindicator is still in BETA, but is quite stable at the moment, the hack was released 3 weeks ago and in that timespan we did over 40 updates and implemented several user suggested features.

I'm up to give some trials to some users, if they wish to try it.

Also, sorry for bad thread design, not a GFX guy myself, lol.

MalwareReborn - August 16, 2017, 12:44 pm

One of the best cheats on HF, I'm using Univex cheats since 1 year and this new cheat is more than grateful

iKoala - August 16, 2017, 12:49 pm

Incredible cheat, been using this for a few days and used it a week ago because I had a free 24 hr trial. I requested a feature and he adds them in. Good support and cheat works amazing.

eco999_temp - August 16, 2017, 12:52 pm

Using my first month so far. What I can say about the experience:UniveX is fast to reply on Discord
Willing to add new features when requested
Aimbot with RCS is great
SoundESP is useful and can be customised (range and frequency)

Frankey - August 16, 2017, 1:50 pm

I have used Vindicator when it still was in beta and it was amazing! I've heard even more features have been added/improved, so I can definitely recommend Vindicator to everyone!

SIM-3327349 - August 16, 2017, 2:06 pm

I have been using it since beta and all works fine, if not, it gets fixed fast after reporting it. I asked UniveX for coding help aswell several times and he was happy to help :-)

Hello, thanks for your interest in our product.

Vindicator probably won't have support for FaceIT AC, but we may make a league based release soon, as we have prepared GamersClub AC hack & we'll look into FaceIT after then, but can't tell any ETA atm.

Have a nice day,

UniveX - May 30, 2018, 8:36 am

Still available & undetected, latest changelog:

-- Fixes 27.05.2018

- Updated process scanning
- Vindicator is now able to re-attach if you restart CSGO without needing to restart hack
- Vindicator now loads up after finding process within 3 seconds instead of fixed 20 seconds+
- You can now start Vindicator first and it'll attach anyway, no need to start CSGO first now

And another update regarding performance will be deployed within two days.

If anyone has any questions, feel free to ask.

UniveX - June 3, 2018, 4:01 am

Still available & undetected, released update regarding performance & stability improvement.

UniveX - June 5, 2018, 5:19 am

Latest changes

Quote:[05.06.2018]

- Several updates for overlay (ESP)
- Raised FPS to 60 instead of 30, the ESP won't be behind sometimes.
- Rewrote some core drawing functions to improve speed and resource consumption.
- Updates to core of reading
- Improved optimization regarding reading player's data, which results in less CPU usage & more fluent work of Vindicator

[30.05.2018]

- Updated data reading, got rid of quite an amount of unnecessary memory calls a seconds, which results in less CPU usage and also improves overall speed of Vindicator.
- Updated weapon parsing
- Updated RCS with AimAssist to work correctly now.
- Improved speed of Trigger (classic)

[27.05.2018]

- Updated process scanning
 - Vindicator is now able to re-attach if you restart CSGO without needing to restart hack
 - Vindicator now loads up after finding process within 3 seconds instead of fixed 20 seconds+
 - You can now start Vindicator first and it'll attach anyway, no need to start CSGO first now
- Overall still available & undetected, being updated nearly on daily basis now, if anyone has any questions, feel free to ask.

UniveX - October 12, 2018, 3:07 am

-- We have released a huge updated to our website and our projects.

Website)

We have launched a new website with complete overhaul and many many changes. Our site now runs on improved custom CMS and mainly responsibility of website has been fixed.

There is a complete design overhaul, together with adding some transparency about slots (you can now see on each product how many users have access to it and what is the maximum amount of active subscriptions) - You can also see when the product was last updated.

User Panel)

Users now have a new user panel, where they can manage their account, their unique builds and HWID resets.

-- We made some changes to unique builds and HWID resets - Both are now free. HWID resets are possible once within some timespan to prevent account sharing.

- Unique builds are now free and built for every user every 1 hour approximately.

Software / Product updates

All of our three releases (currently) were updated to support latest website and together received performance updates - for example trigger bot now uses around

0,3% of your CPU, ESP is a bit higher due to overlay, but all of these were reduced by atleast 60% and their performance is much better.

ESP / Trigger

- Both of these were updated to support sig scanning instead of waiting for VPS to update needed info, meaning, it now works immediately after CSGO updates.

Vindicator

- Updated some bugs that have gathered over time and added some new features, CPU usage reduced by nearly 60% and improved overall performance of the cheat.

New Auth Module

- We have added new authentication module, which will keep all stuff up to date, new account panel has subscription info in it, with possibility to extend your subscription right from the client - or in case if it's expired, you can extend right away before logging in.
- You have real time notifications regarding your account on your desktop - if allowed.
- You are allowed to hide all GUI (in case playing on LAN, or something.)
- Much more for you to discover. :)

--Every user that had a subscription running while we were changing to new site has received free 15 days to their subscription plan.

Thanks for reading this wall of text & have a nice day,
UniveX

UniveX - October 18, 2018, 4:44 am

Thanks:)
Greetings,

sadly trials are not possible due to sale cap. If I gave trial to everyone who asks, it would break the purpose of sale cap.

Sorry & have a nice day,
UniveX

Updated product page with more screenshots of GUI and features, planning to get video up soon, but I'm myself a potato in video editing, so got to find someone who is able to do one, hopefully I get it done soon.

If you have any questions, feel free to ask.

UniveX - November 15, 2018, 9:52 am

Pushed several updates regarding radar and all seems to be stable, also updated unique builder to be more responsive now.

Anyway, still available and undetected, if you have any questions, feel free to ask.

UniveX - November 18, 2018, 1:00 pm

Still available & undetected, new GUI is gonna be added in new update for Vindicator, which will occur very soon.

Hello,

depends on what you mean, if you mean customized per user, that could be done, if you let me know. If you mean unique builds per user, that's done automatically with no additional fees, each users gets different build approx every 2 hours.

Have a nice day,
UniveX

UniveX - January 9, 2019, 5:02 pm
