Thread: [Mining profit reinvest in gpus or Cash out?](#)

PoLoW - August 18, 2017, 11:34 am

I have two gpus so far i don't know if i should use the money i earned from mining to buy a third gpu to increase daily income or just cash out my investment money back in my bank account.

What do you guys recommend ?

PS i have around \$250 currently, planning to wait until i have good amount of money and buy TI ftw3 since 1070 is currently not cheap about \$500 last time i checked.

I'd say invest, you got some time left before PoS will be implemented.....and you can also switch to other coins.

The Illusionist - August 18, 2017, 11:58 am

I would highly recommend expanding until you have one full mining rig of 6 GPUs.

Tnx

C A S H O U T.

Sell before it swaps, the difficulty is too high and you get to make a quick buck reselling your GPUs for a high price.
