Thread: [High ping on clients, clients disconnecting](#)

LiftMaster - August 19, 2017, 2:06 pm

Hello im having a bunch of issues. My build lets clients connect, but the pings like 800+ everytime and they loose connection minutes after the initial connection. Ive tried Orcus with cyberseal, Orcus with Dataprotect. IM with cyberseal, IM with dataprotect. All with very little success. Im using freenom dns with NVPN at this point very frustrated. Have 100+ offline clients with 5 online

?De?dW?lker - August 19, 2017, 7:29 pm

Whats your internet speed? this could be caused due to a poor internet connection, quite obvious by the high ping.

LiftMaster - August 19, 2017, 8:26 pm

Should not be that slow.

NVPN have used them in the past was never an issue. Only vpn ive used assumed there all that slow.

LiftMaster - August 19, 2017, 8:41 pm

Actually i just did a speedtest it was 40mbps which should be able to handle a few bots no problem.

CKkio23 - August 19, 2017, 9:08 pm

Most VPN sold here are just for Torrents and Ratting. Speeds are horrible and not for regular browsing. My Connection is fine. The ones that use rented vps has this issue.

Should not be that slow.

The owner of the VPN told me it's normal, he gave me an optimised location for free and told me to use L2TP instead of open vpn. Then my speeds went up to 70-90.

Maybe you should consider that their Internet Speed also counts

LiftMaster - August 20, 2017, 6:43 pm

It has nothing to do with internet speed.

I am having the exact same problem with all the rats and crypters you have mentioned. Including
No one seems to know what the solution is.

There is \$\$ in the table for anyone who can resolve this problem.

I know of atleast 2 others that have had similar issues. Atleast I know im not alone.
Ive offered cash aswell.

This Weekend - August 22, 2017, 12:34 pm

I am using Netwire+DarkEye and I get the same problem. Once connection is established, it drops
after a minute.

Crosstox - August 22, 2017, 1:41 pm

IM5+Spartan+PhyberVPN= 40-60 ping on most clients

arbyhteam - August 22, 2017, 4:44 pm

yeah we all have that problem i think

never had this problem with LL though :)

LiftMaster - August 22, 2017, 5:23 pm

Never was a big fan of spartan and next time ill take a look at phyber. Thanks

Come home to dns blacklisted thanks HF sellers

No body seem to be interested in helping look into this problem.

It is apparent that some of the tools has some sort of honeypots or something.

LiftMaster - September 2, 2017, 6:28 am

Still having these problems, 15 clients on, 3 hours later 0. Had low ping good connectivity no antis.

Makes no sense.

Purple Kief - September 2, 2017, 7:38 am

If you still offer money to whoever finds the issue you're free to PM me. I will only take BTC.

jesus christ

My VPN drops my connection by 3mb lmao

I just use a [censored] server lol

Go to [https://www.\[censored\].com](https://www.[censored].com)

Buy the lowest price VPS there is in the nearest location to you possible
Then simply under "Settings" on the vps panel once you've bought it, select install applications, and then load the application "CentOS 6 Openvpn" there you go a pre setup VPN was just installed onto your VPS you just bought, simply connect to it by using the openvpn panel by going to the IP address of the box in your web browser.

Taa daa, not hard at all, extremely simple, great VPN.

Donezo

Or if you just want a VPN and you're insanely lazy
just go get zorrovpn just don't be a dumbass and do something like use a server in Australia when you live in lets say the UK.
